

# Micnova MQ-7X Battery Replacement

The Micnova MQ-7X Sensor Inspection Loupe uses 2 - CR2032 batteries. These batteries are very common and can be found most any place that sells batteries. To access these batteries, use a strong fingernail or other thin/flat strong object to lift up on the battery compartment. When brand new these compartments will take some pressure to open. This is why I have provided a picture showing how/ the direction in which they open. Both compartments pull straight up and all of the way out of the loupe so that the batteries can be replaced.
