

Quick Reference

EKTAPRO

The Quick Reference - is designed to be your ultimate source to all applications, technical constellations, accessories etc. for **Kodak Ektapro Slide Projectors**

Introduction to the Millenium Edition of the Quick Reference

50 questions regarding projection techniques with EKTAPRO. This is our most important improvement in this revised edition. You will find an answer to all questions in this Quick Reference. We will take you there. With the help of these questions, we would like to help the user not only to find problem solutions but we would like to point out the variety of applications/AV-solutions possible with Ektapro projectors.

Not only the 50 questions but the index on page 76 will help you to get quick and specific information.

Should we have missed something - please let us know. Our address is found in the appendix.

Stuttgart, January 2001

Compatibility

1. **Q:** I still own lenses with spiral rack for my old Kodak S-AV projectors. Can I use these for the Kodak EKTAPROs as well?  **PAGE 30**
2. **Q:** I would like to install an EKTAPRO in an auditorium/conference room. Is it possible to use the 6 pole cable of the speaker's desk for controlling the EKTAPRO?  **PAGE 67**
3. **Q:** I would like to take my EKTAPRO projector when I travel internationally. Is there anything I need to consider?  **PAGE 7**
4. **Q:** I had a slide show programmed in Germany and would like to show it in the U.S.A. What do I need to consider?  **PAGE 7**

Slide Trays/Transport

5. **Q:** Since I make very many presentations, using the 140 slide tray seems very reasonable. What are the differences between the 140 and the 80 slide tray?  **PAGE 24**
6. **Q:** I already projected several slides. How can I take the slide tray off quickly?  **PAGE 25**
7. **Q:** I would like to tilt the projector for a special application. What do I need to consider?  **PAGE 53**
8. **Q:** Sometimes it is hard to put the slide tray onto the projector. What do I need to consider?  **PAGE 25**
9. **Q:** I would like to project slides endless with built-in timer. Anything to consider?  **PAGE 18**
10. **Q:** I would like to show several slides in continuous operation with built-in timer. After the last slide has been projected, I want the slide tray to go back to 0-position and show the first slide again. What do I do?  **PAGE 18**
11. **Q:** I have an Ektapro without built-in timer. How can I make an automatic slide change anyhow?  **PAGES 19 - 21**

Autofocus

12. **Q:** Even though the AF is on, I feel like the slides are not focussed.  **PAGE 26**
13. **Q:** The AF does not always work with my 4 x 4 slides. Why is that?  **PAGE 26**

Control

14. **Q:** I was able to control my old S-AV projectors via an AV tape recorder. Does this work with the EKTAPROs as well?  **PAGE 48**
15. **Q:** I would like to turn the projector on and off via the power switch. However, I don't want the slide tray to go into 0-position. I would like to continue with the last slide that had been shown.  **PAGE 48**

16. Q: Is there any way to lock certain buttons on my IR transmitter in order to avoid pressing a wrong button during my presentation?  **PAGE 66**
17. Q: Can I connect and control the projector directly via the computer?  **PAGES 42, 45**
18. Q: Can I control the projector directly via my Apple Macintosh computer?  **PAGE 44**
19. Q: I would like to make a quick slide change. The slide should only be visible for a fraction of a second. How do I program this?  **PAGE 46**
20. Q: Can I connect and operate a computer and an IR remote control simultaneously?  **PAGE 47**
21. Q: Is it possible to transmit computer data over a greater distance – possibly cable-free?  **PAGE 49**
22. Q: We would like to utilize projectors in theaters. Is it possible to integrate the projectors in the already existing light installation?  **PAGE 58**
23. Q: Is a smart solution available to connect the projector with different control systems?  **PAGE 60**
24. Q: I have an enormous stock of slides. I want to present my Power Point charts together with my slides for my business presentations. Is it possible to connect a slide projector and a data projector simultaneously to a laptop?  **PAGE 68**
25. Q: I am a musician and would like to combine slide projection with my music. Is it possible to control the projector synchronous to my live music?  **PAGE 59**

Lamp Module/Light

26. Q: How can I assure that an unused spare lamp with full life time is always available in the dual lamp module?  **PAGE 35**
27. Q: Can I also utilize the dual lamp module into the EKTAPRO 3020 resp. 320?  **PAGE 37**
28. Q: Can I also utilize the single lamp module into projectors with the dual lamp modules?  **PAGE 37**
29. Q: My slides regularly develop sweat spots. How do I avoid this?  **PAGE 41**
30. Q: I already have two older EKTAPRO models (5000) and now bought an EKTAPRO 5020 with Extra Bright Lamp Module. Is it possible to adjust the new projector in brightness resp. color temperature to the EKTAPRO 5000?  **PAGE 39**
31. Q: How bright are the various lamps actually?  **PAGE 34**
32. Q: What actually makes the Bright Light Lamp Module special?  **PAGE 36**
33. Q: My slide frames are black. Can they be used with the Extra Bright Lamp Module?  **PAGE 40**

34. Q: How bright are the projectors actually?  **PAGE 37**

Remote Control

35. Q: Although the IR remote control is supposed to reach a 30 m range, I get no response at 10 m. Why is that?  **PAGE 11**

36. Q: The range of the IR remote control (of 30 m) is not sufficient for my application. Is it possible to extend the range?  **PAGE 11**

37. Q: The premises are so adverse that I cannot aim directly at the projector from the lectern. Is it possible to place the receiver somewhere else?  **PAGE 11**

38. Q: Is it possible to operate two IR systems in one room?  **PAGE 13**

39. Q: Is it possible to control two projectors individually with one IR transmitter?  **PAGE 13**

40. Q: Can an IR remote control be connected to the twin socket adapter instead of the cable remote?  **PAGE 15**

Lenses

41. Q: Long focal distance lenses have the disadvantage that the projected image moves e.g. during slide change. Is there a solution?  **PAGE 31**

42. Q: Why can't all lenses be used for 4x4 projections?  **PAGE 33**

43. Q: What is the difference between EKTAPRO Standard and Select lenses?  **PAGE 29**

Miscellaneous

44. Q: For a special application I would like to turn off the "No Slide No Light" feature. The projector aperture should remain open if no slide is in the slide gate. Is that possible?  **PAGE 27**

45. Q: What is fade in/out? How do I activate this on my projector?  **PAGE 22**

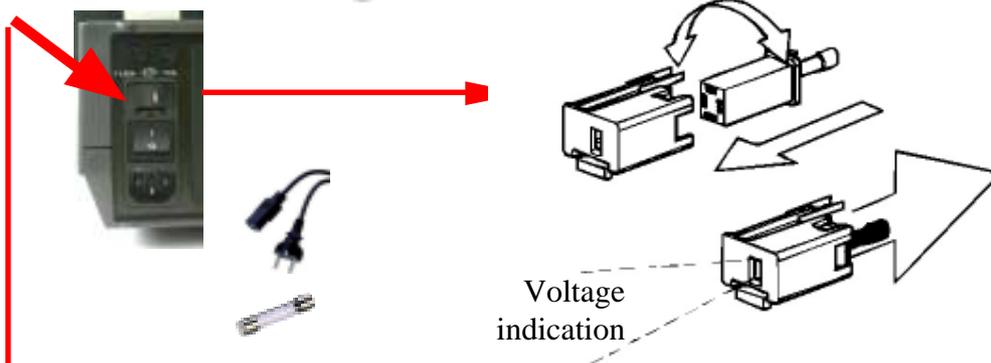

46. Q: I would like to get a longer dissolve cable for my Master/Slave application (dissolve with 2 EKTAPROs). Can I use an ordinary RS232 extension cable?  **PAGE 65**

47. Q: Is it possible to get the images on my computer onto slide material?  **PAGE 28**

48. Q: I would like to build the projector into a special rack/furniture. Are there any specified fixing holes?  **PAGE 54**

49. Q: To eliminate fan and slide change noises, we would like to build the projector into a noise insulation. What do I need to consider?  **PAGE 54**

50. Q: Before starting my multivision show I need to adjust the projectors accurately. Are there any aids available?  **PAGE 55**

EKTAPRO Slide Projectors can be used around the world if you pay attention to the following:

- 1.** Get informed about the local mains plug at your destination. Different wall plugs need a different mains cable or an adaptor!
- 2.** Get informed about the local mains voltage. You need to set the voltage selector to the local mains voltage at your destination. *An incorrectly adjusted mains voltage can damage the projector!* For correct voltage setting, see the instruction manual.
- 3.** Different fuse: countries with **100 or 120 V** mains need a **4 A slow blow/250 V fuse**; countries with **220, 230 or 240 V** mains need a **T 2A L/250 V fuse**. For fuse exchange, see the instruction manual.

Use of slide shows:

Please note the following when travelling international with Ektapro projectors and multivision slide shows:
Due to different voltage frequencies (50 Hz or 60 Hz), some fast programmed slide sequences may be projected a little bit faster or slower!

EKTAPRO Accessories	CAT NO	See page
4 x 4 Condenser Kit	714 4967	33
80 Slide Tray	712 8580	24
Cable Remote (4 m)	712 1080	9

Remote Control Cable

■ General

Ektapro Cable Remote

All current and all former Ektapro models

Extension cable
CAT No
712 5925
8 m

Ektapro Cable Remote
CAT No
712 1080
4 m

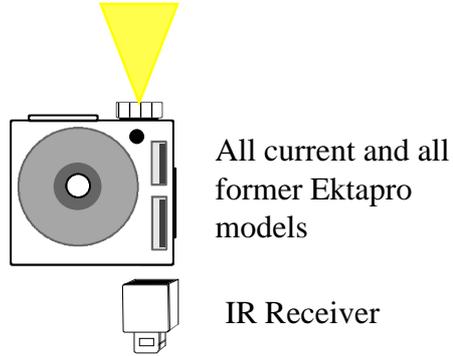

Max. 3 extension cables = 28 m!

Your Control Distance:	up to 4 m
You Need:	cable remote, only
Your Control Distance:	up to 12 m
You Need:	cable remote and 1 extension cable
Your Control Distance:	up to 20 m
You Need:	cable remote and 2 extension cables
Your Control Distance:	up to 28 m
You Need:	cable remote and 3 extension cables

Remote Control Infrared

■ General

30 m!

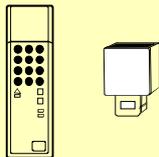

Note

Dimmed fluorescent light (neon) may reduce max. achievable IR distance! For more information see page 12!

IR Remote System RA
CAT No 712 1072
and RA/LP
CAT No 712 1064

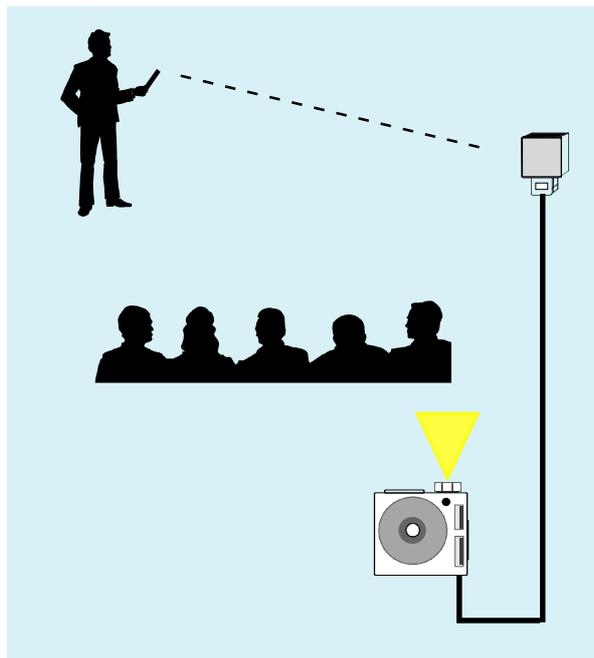

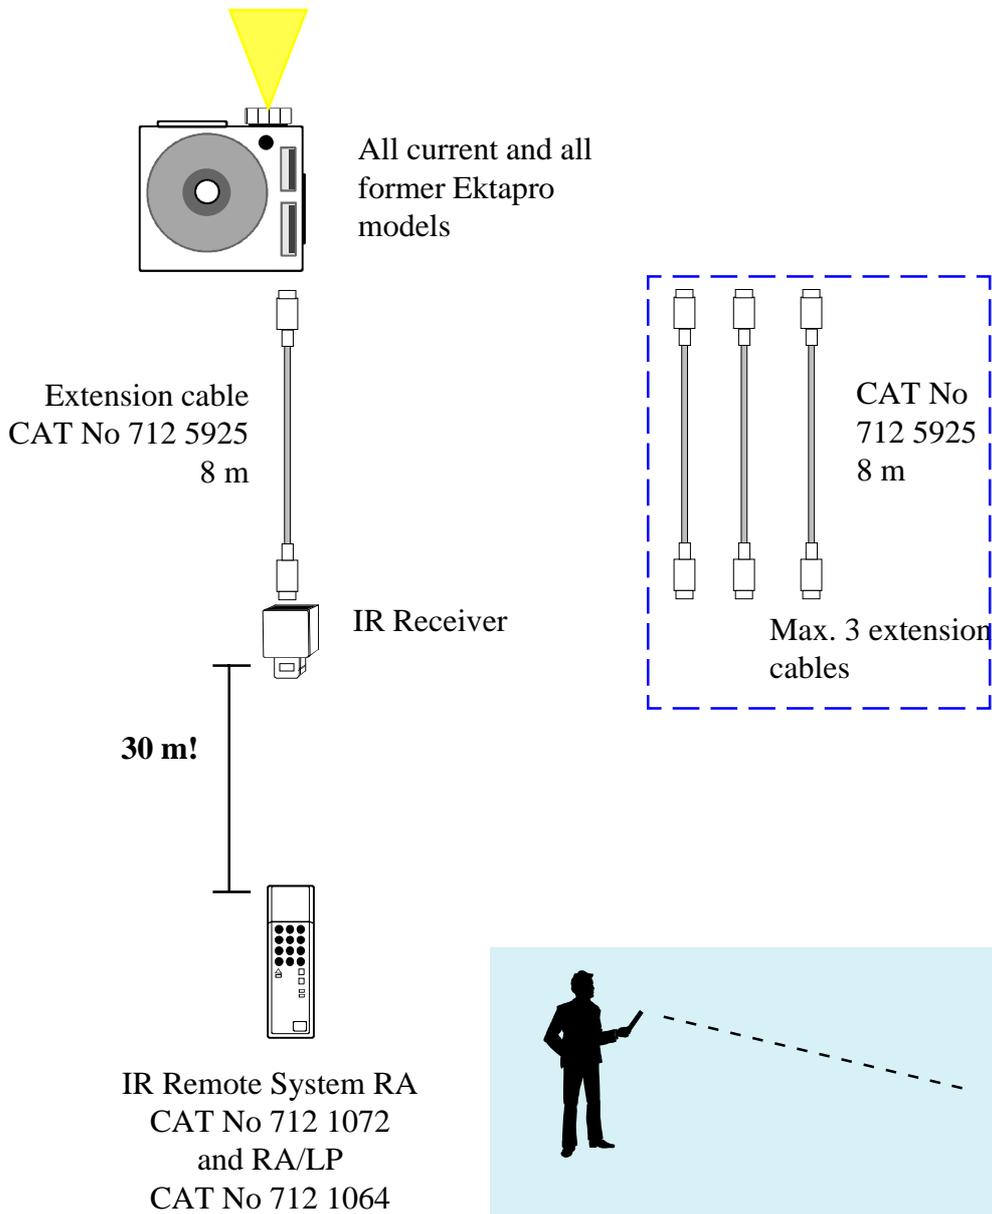

The Kodak IR Remote System
always consists of a transmitter and
a receiver!

Remote Control IR + Extension Cable

- One Ektapro Projector, IR Remote System and 8 m extension cable for optimal placement of IR receiver

Remote Control

Reduced operation distance with IR remote controls

Reduced operation distance

A reason for reduced operation distance could be fluorescent light which is dimmed. The light itself emits IR radiation that is influencing the IR operation of the projectors in a negative way.

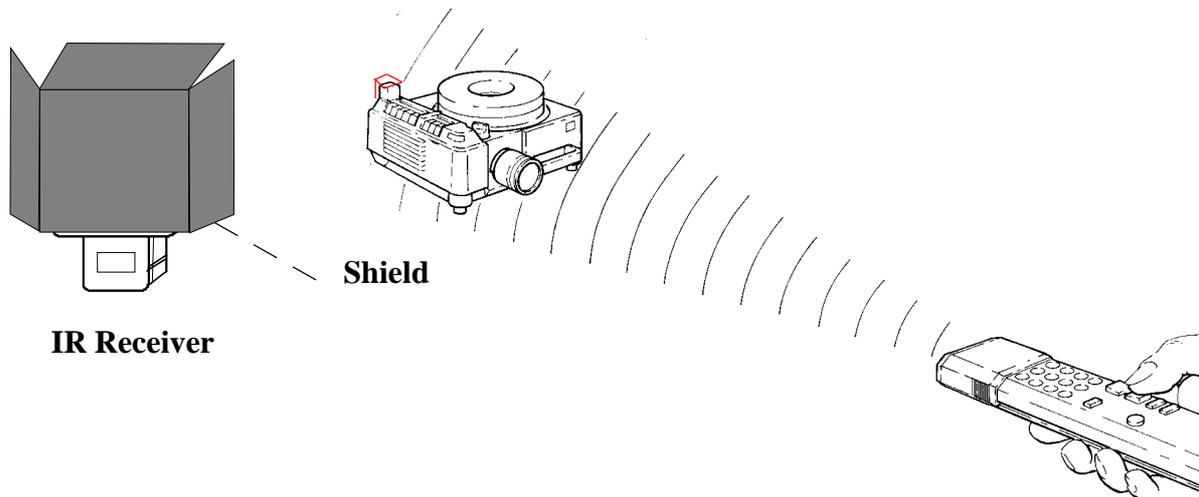

Solution

We recommend the following two solutions:

1. Use of an extension cable (CAT No. 712 5925, see page 11)

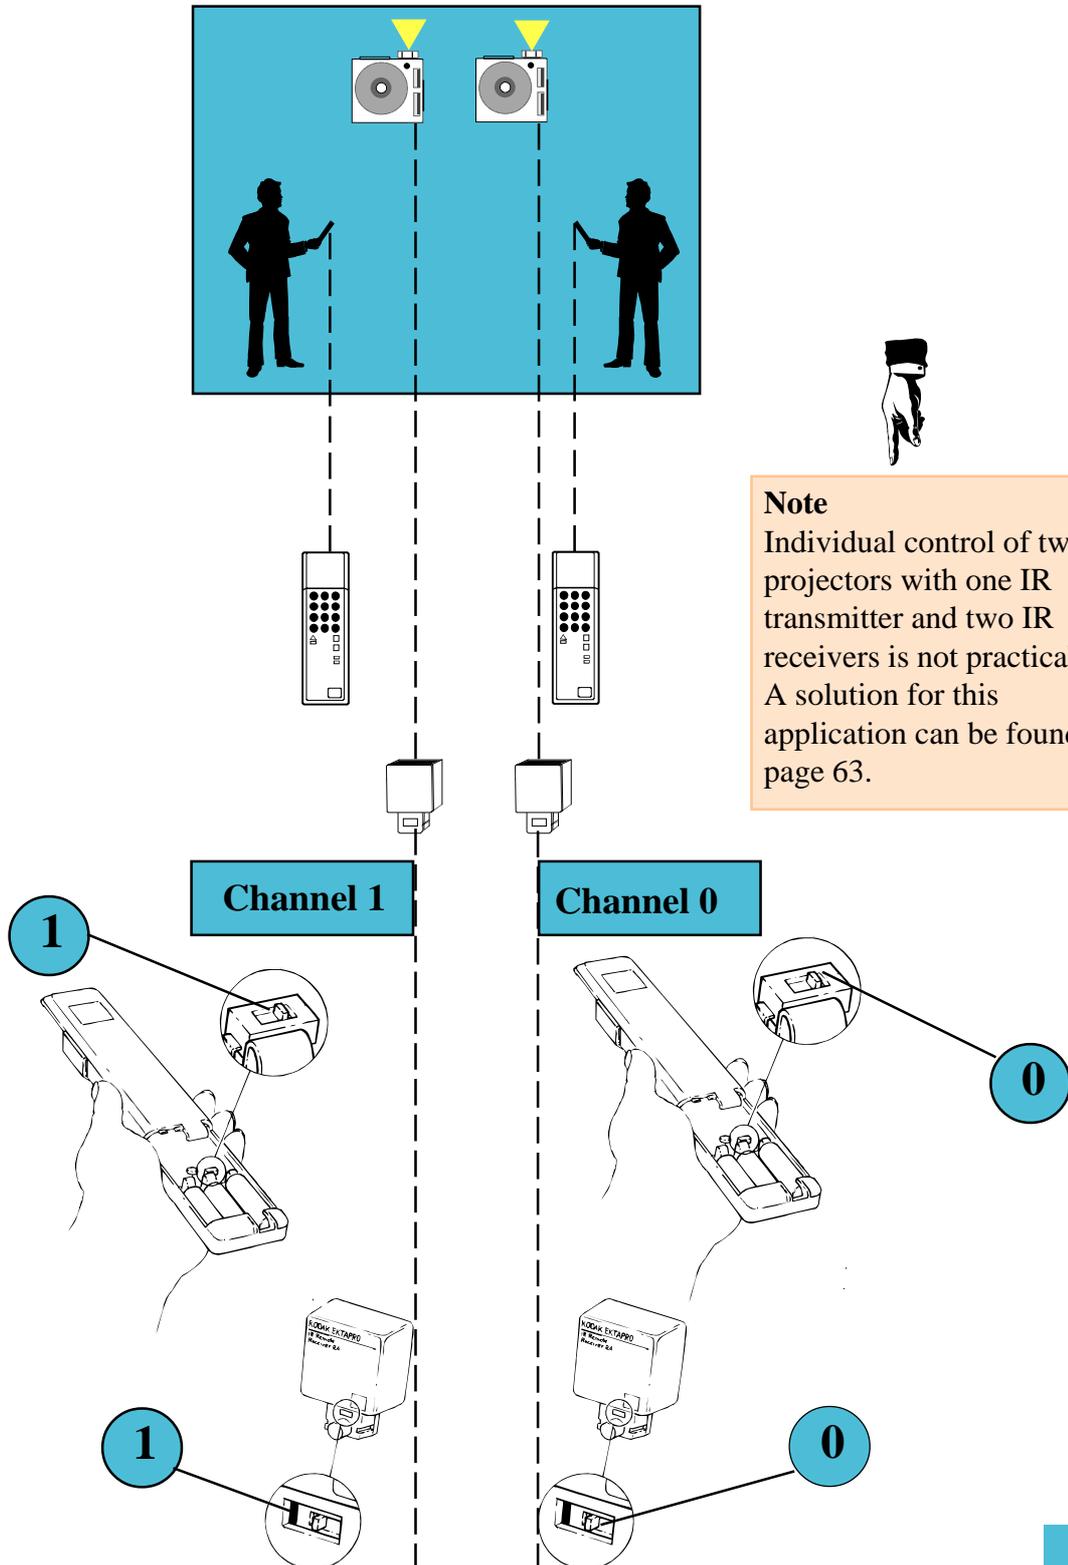

2. A shield for the IR Receiver

As the housing is transmissive for IR radiation we recommend to use a black carton to shield the top and rearside of the receiver. According to our experience in most cases the problem will be overcome.

Remote Control 2 IR Systems

- Individual control of two projectors in one room via 2 IR Systems

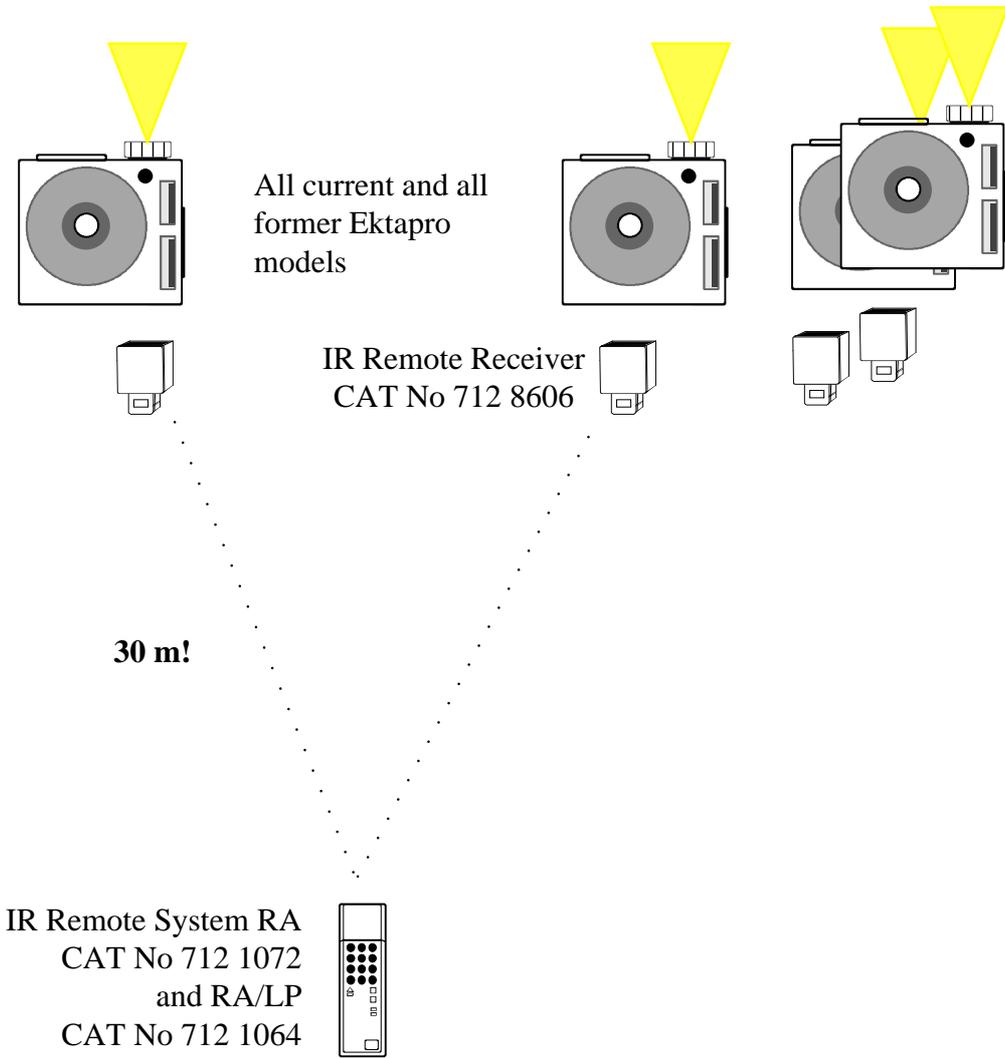

Note

Individual control of two projectors with one IR transmitter and two IR receivers is not practicable. A solution for this application can be found on page 63.

Parallel Projection

Via IR Receivers

■ **IR Remote System and additional receivers in a single room**

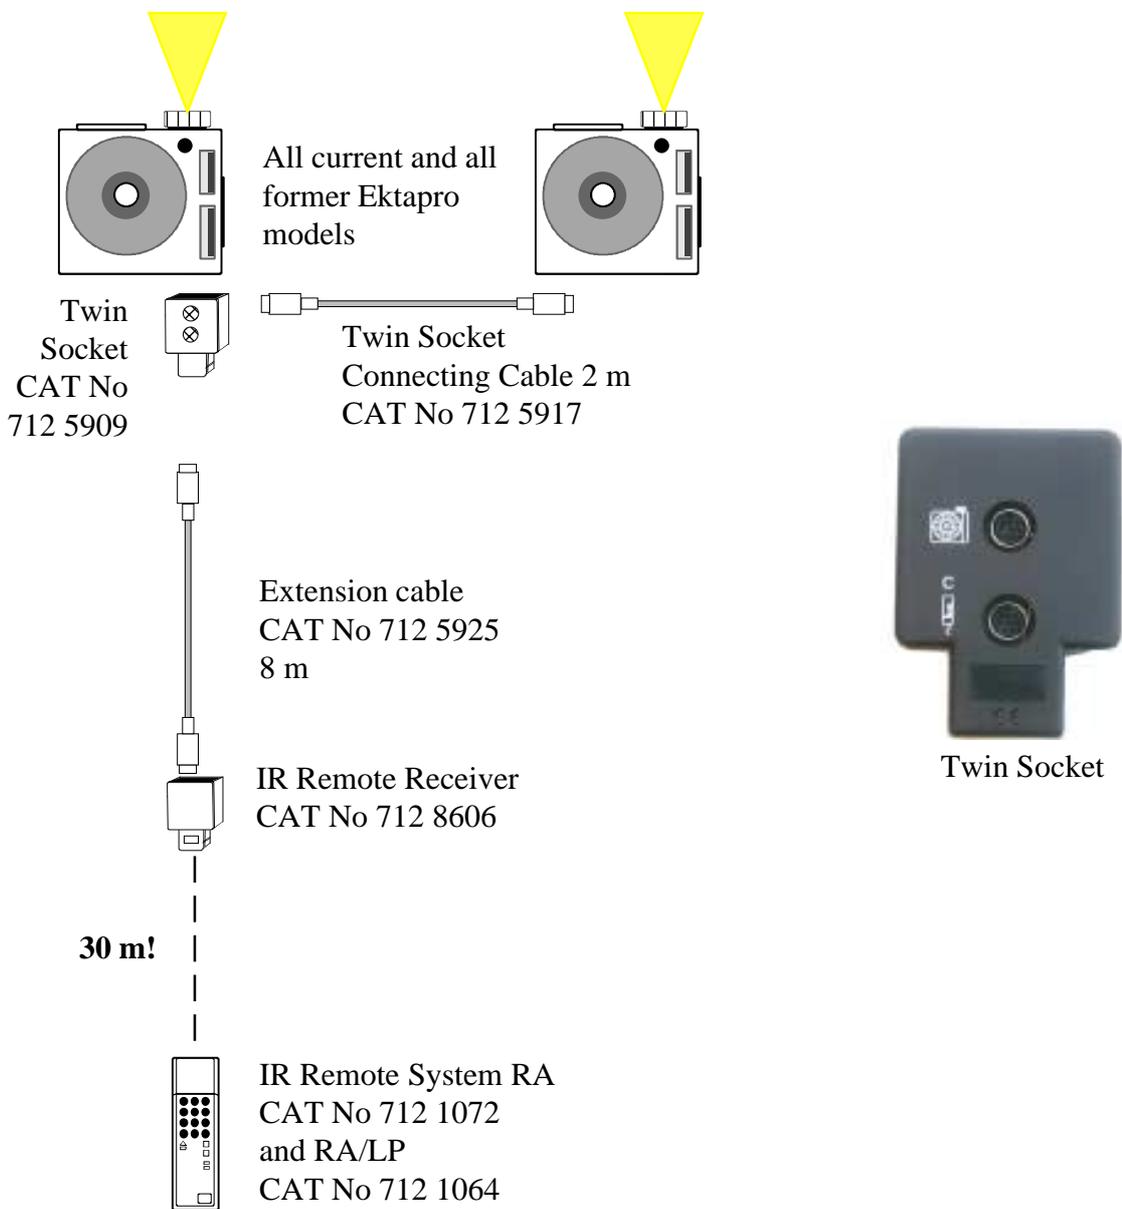

Parallel Projection	
You want to control:	2 projectors
You Need:	1 Remote System RA and 1 IR Receiver
You want to control:	3 projectors
You Need:	1 Remote System RA and 2 IR Receivers
You want to control:	4 projectors
You Need:	1 Remote System RA and 3 IR Receivers

Parallel Projection

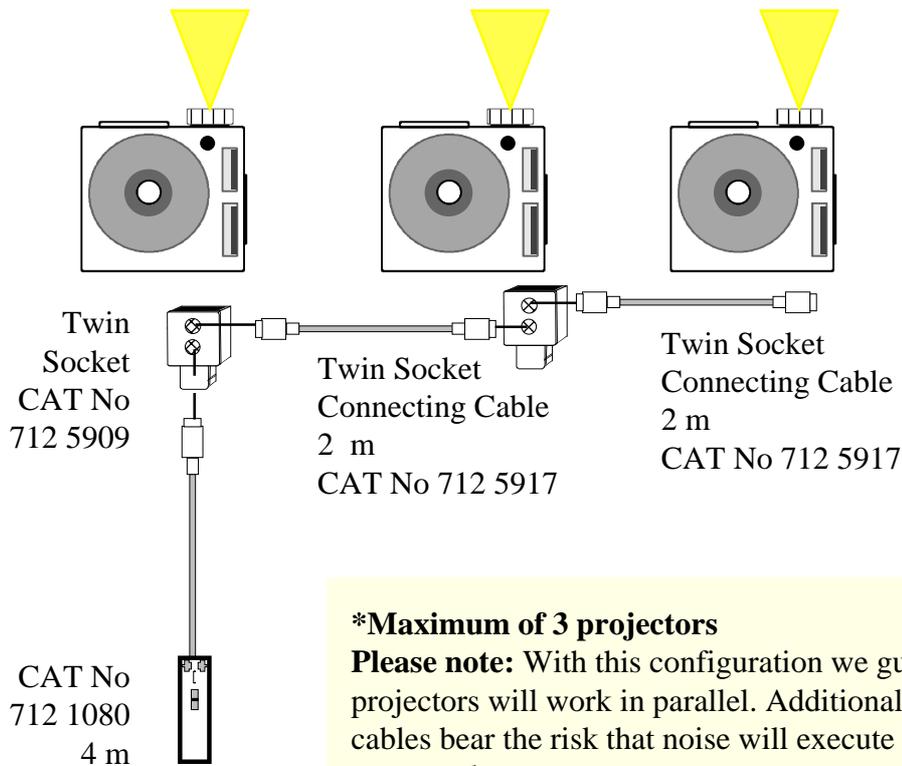

IR and a Twin Socket

■ IR Remote System and a Twin Socket

Parallel Projection Cable Remote + Twin Socket

■ Cable Remote and Twin Socket(s) for max. three projectors*

***Maximum of 3 projectors**

Please note: With this configuration we guarantee that 3 projectors will work in parallel. Additional projectors or longer cables bear the risk that noise will execute unwanted transport commands.

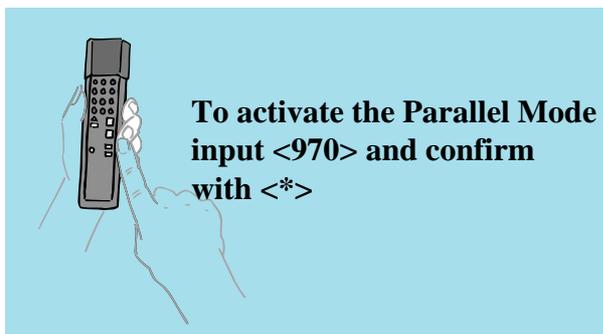

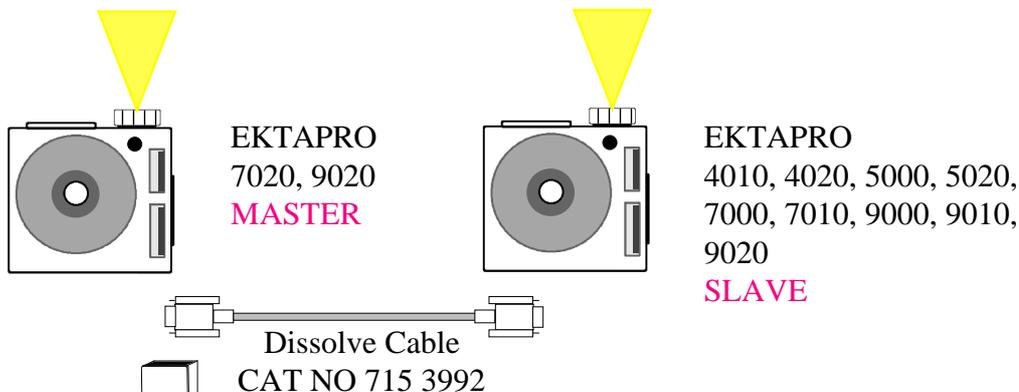

Parallel Projection	
You want to control:	2 projectors
You Need:	1 Cable Remote 1 Twin Socket
You want to control:	3 projectors
You Need:	1 Cable Remote 1 Twin Socket
You want to control:	2 projectors
You Need:	2 Twin Socket Connecting Cables
You want to control:	3 projectors
You Need:	1 Cable Remote 1 Twin Socket
You want to control:	2 projectors
You Need:	2 Twin Socket Connecting Cables

Note

If cable length is not sufficient, it can be extended. See page 9.

Parallel Projection Parallel Mode Setting

■ One IR Remote and two Ektapro 7020 or 9020 Projectors

IR Remote System RA
CAT No 712 1072
and RA/LP
CAT No 712 1064

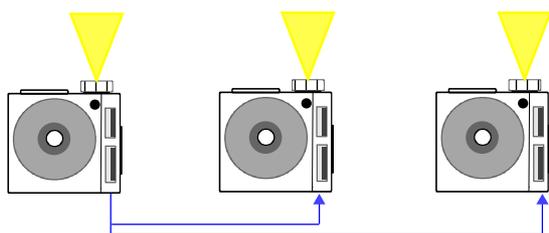

Note

The Parallel Mode (970) must be set again after projector has been switched off/on again! If you want to keep the setting, switch projector to standby! Do not switch it off!

Need a third projector in parallel?

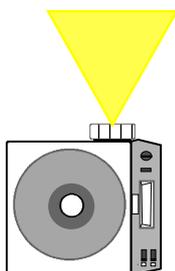

With a special cable available from AVSZ (hand icon address page 69) you can connect a third projector

Compliments of:
**Endless Projection
Timer**

■ **Integrated Timer**

The built-in timer enables the projector to automatically transport your slides. Eleven time settings between 1 and 60 seconds can be made.

EKTAPRO
5020, 9020

Note Ektapro 5020 Projector:

In order to avoid "dark pause" it is recommended that the slide tray is filled as completely as possible (81 or 141 slides):

1. Due to the tray design, it is not possible to insert a slide directly into the zero compartment

2. Insert the slide directly into the slide gate

3. Place the tray as usual in the zero-position (see page 25)

4. With the next slide transport the slide will be lifted from the slide gate into the zero compartment of the tray

Note EKTAPRO 9020 Projector:

You can immediately bring the tray back to the zero position after the last slide with the help of the automatic zero positioning feature. This is useful when continuous projection is required using only a few slides.

Compliments of:
**Endless Projection
Timer**

■ **External Timer (no Kodak product)**

EKTAPRO
320, 4020,
7020

Note

An external timer is offered by AVSZ
( Address on page 69).

External Timer

Endless Projection Autotimer Setting

■ One Projector, IR Remote System and Autotimer Mode Setting

EKTAPRO
4020,
5020,
7020, 9020

IR Remote Receiver
CAT No 712 8606

30 m!

IR Remote System RA
CAT No 712 1072
and RA/LP
CAT No 712 1064

Settings 1-60 sec. To activate the autotimer mode input codes 600 - 660.

**Example: 4 s
Input <604> and confirm with <*>**

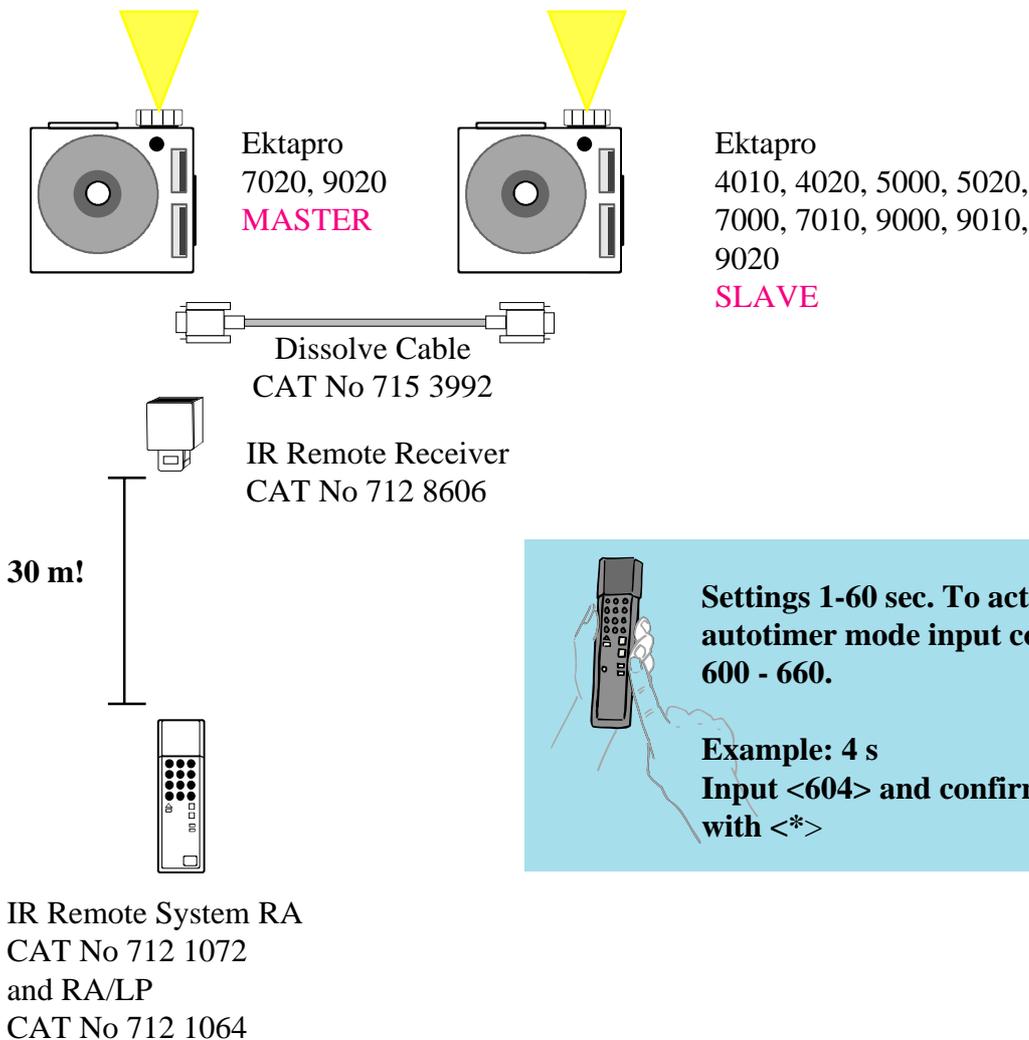

Note

The Autotimer Mode must be set again after projector has been switched off/on!

Endless Projection Autotimer Setting

■ Two Projectors, IR Remote System and Autotimer Mode Setting

Note

The Autotimer Mode must be set again after the projector has been switched off/on!

Compliments of:
www.KodakParts.com

Soft Slide Change (One Projector)

■ **Fading up and down (Soft Slide Change) with one projector via IR Remote System**

Fading avoids hard light changes during slide transport!

Fade Down: Set time via IR. Within this time lamp decreases brightness!

Fade Up: Set time via IR. Within this time lamp increases brightness!

EKTAPRO
7020, 9020

IR Remote Receiver
CAT No 712 8606

Input fade times of 0 sec (hard cut) up for a long fade of 9.9 sec in increments of a tenth of a second
Code: <801 - 899>

Example: 4 s
Input <840> and confirm with <*>

**max.
30 m!**

IR Remote System RA
CAT No 712 1072
and RA/LP
CAT No 712 1064

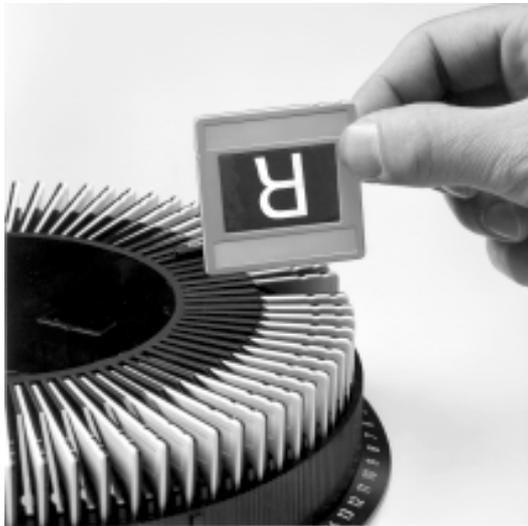

Note

The Fading Mode must be set again after projector has been switched off/on! If you want to keep the setting, switch projector to standby! Do not switch it off!

Trays

Inserting Slides

■ General

BEFORE:

- Check each slide's orientation (horizontal or vertical), and arrange them in the order you wish to show them. *Then turn the slide upside down.*
- Number each mount in the upper right-hand corner of the film's shiny side.
- Insert your first slide into the first slot in the tray so that the number is visible on the outer circumference of the tray. Insert your second slide in the second slot with the emulsion (dull side) facing your first slide, and so on.

AFTER:

- View each slide against a light source and orient for projection (check for proper horizontal, vertical, right and left positioning.)
- Arrange the slides in the order you wish to show them.
- Rotate them 180 degrees - *upside down.*
- Number (or mark) each mount in the upper right-hand corner.
- Insert the slides into the tray slots so that the number (or mark) is on the outer circumference of the tray.

Trays

Tray Selector Switch

KODAK
EKTAPRO Slide
Tray for **80** slides
CAT. No. 712 8580

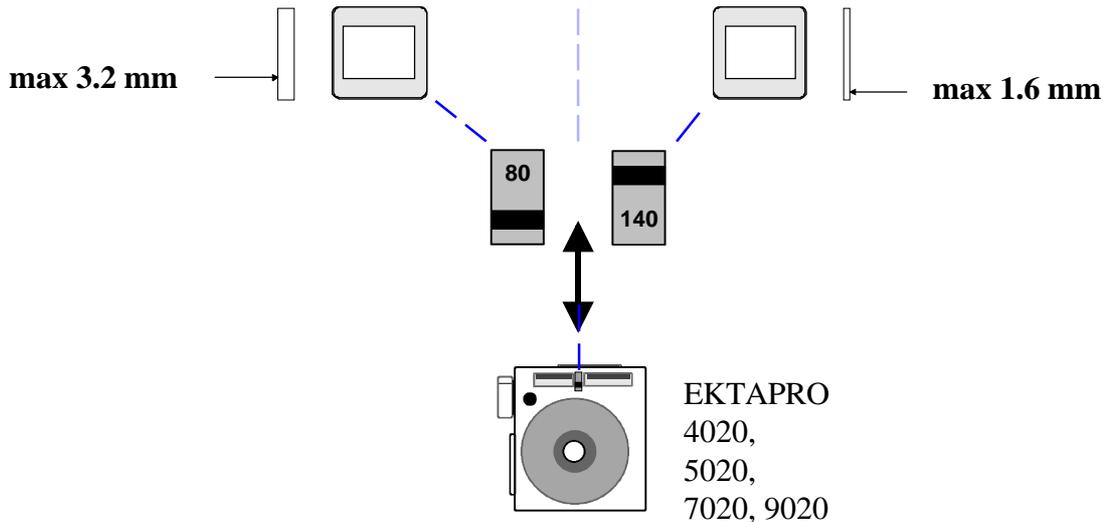

KODAK CAROUSEL TRANSVUE
Slide Tray for **140** slides
CAT. No. 184 0768

For use with all types
of mounts (e.g. 3 mm,
2.3 mm CS,
cardboard, LKM,

For use with cardboard and very
thin glassless plastic mounts,
only!

Installation and Removal

■ Installing the slide tray

Important note: First switch on the projector before you install the slide tray. This will ensure that the projector's transport ring is in the zero position. Otherwise the tray cannot be placed properly and will not be transported.

■ Removing the slide tray

Always lift off the slide tray in the zero position!

(Indication: The tray is in zero position when the green LED at the front of the projector lights up (not Ektapro 320!))

Move tray to zero position:

a) Using the slide change button on your projector or remote control units

Hold the slide transport-backwards button down. The slide tray goes into rapid search and stops automatically in the zero position.

b) Using the IR Remote Control

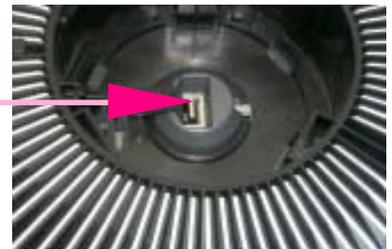

Select "0" on the keypad and confirm with "*". The slide tray moves to the zero position.

c) Using the mains switch

Turn the projector off by the mains switch. When the projector is turned on again, it will complete a system check and bring the slide tray back to the zero position!

Removing the slide tray in any position (e.g. after a slide jam)

1. Push aside and hold the slide tray lock

2. Lift off the slide tray.

3. Turn slide tray over and rotate the base plate until it locks into the zero position, otherwise the slide tray cannot be replaced on the projector in the zero position.

■ Important Note for use of Autofocus

Ektapro
5020, 9020

■ Important

Use **either** glass or glassless (cardboard) mounted slides! **Never mix them!**

■ AF and Superslides

Use of Autofocus with 4 x 4 slides and 4 x 4 condensor is not recommended. As the sides of the condensor are too smooth (not grounded, IR radiation from the lamp can enter the condensor and may interfere the IR detectors of the AF.

■ AF and slide mount material

Some slide mounts consist of plastic material that allows the IR radiation to pass through. As not reflected it will not be detected by the IR sensor. The AF will not work properly. In this case you need to replace these mounts.

■ **Switchable “no slide no light” feature**

No slide no light means: If no slide is in the tray compartment (and therefore, in the slide gate of the projector) the shutter will not open. No disturbing white light will interrupt your presentation.

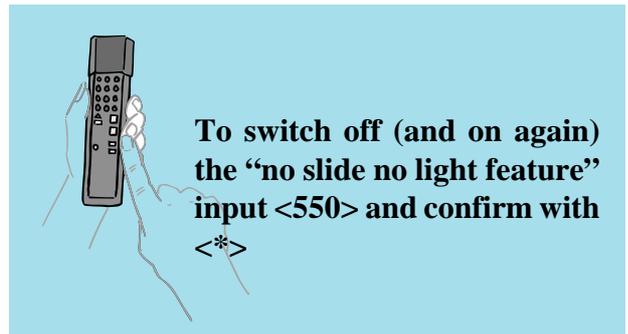

Ektapro
4020, 5020, 7020
and 9020

IR Receiver

IR Remote System RA
CAT No 712 1072
and RA/LP
CAT No 712 1064

Note

There are two reasons to switch off this feature:

1. High IR-transmissive slide mounts

There are some mounts on the market which do not reflect IR radiation. That means they cannot be detected by the IR sensor in the slide gate. The result is that the shutter will not open.

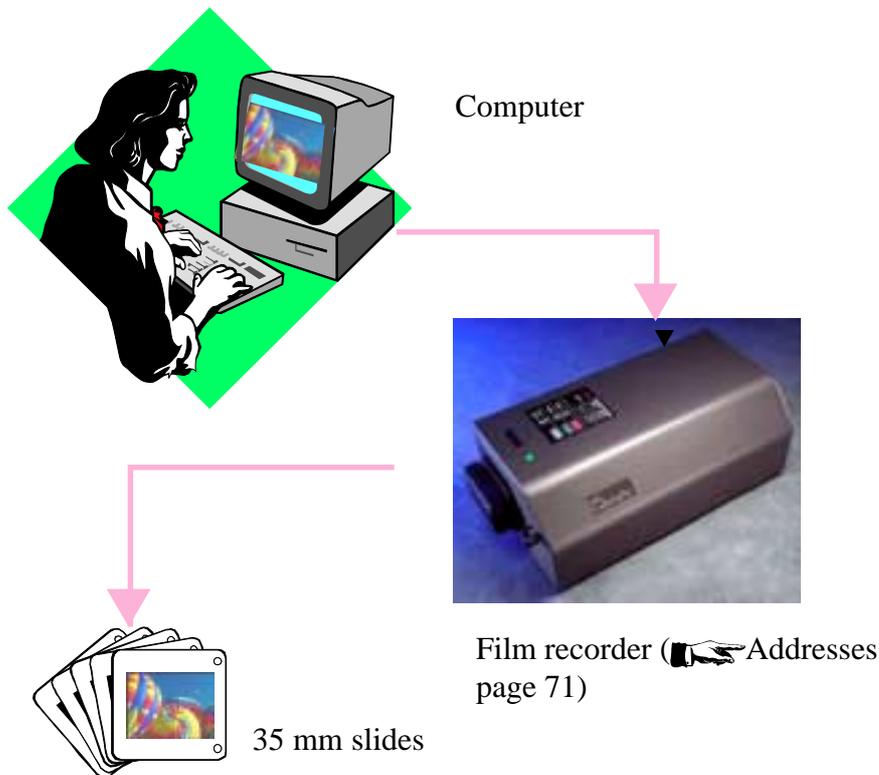

2. Light on the screen

Tray replacement is easier done if the room is not totally dark. You will appreciate to have light on the screen.

Compliments of:
www.KodakParts.com

Slide Recording

■ Creating 35 mm slides with film recorders

Nowadays it is very easy to create 35 mm slides from images generated by the computer. Modern film recorders are easily set up as they support WINDOWS. Therefore, they are as easily used as printers.

You can use any software (e.g. PowerPoint, Word, Photoshop) to create templates (with regards to the 2:3 image ratio).

In almost every city you will find service companies which will offer the recording of your electronic files. Mostly they are listed in the yellow pages of the phonebook. Some offer their service via the Internet

Lenses General

■ Available lenses from Kodak

Kodak EKTAPRO FF Lenses	
75-120 Zoom	CAT 847 0346
100-150 Zoom	CAT 143 3432
100-200 Zoom	CAT 712 5743
85 mm	CAT 712 5503
100mm	CAT 712 5511
180mm	CAT 712 5529
Kodak EKTAPRO Select FF Lenses	
75-120 Zoom	CAT 712 5479
87-200 Zoom	CAT 712 5487
200-300 Zoom	CAT 712 5495
36 mm	CAT 712 5446
93 mm	CAT 712 5453
150mm	CAT 712 5461

Why Select?

- ✓ Select stands for a Higher Quality Lens. There are four main differences:
- ✓ All lenses have a metal housing
- ✓ All lenses are multicoated
- ✓ Each lens has individual focal length information accurate to 0.1 mm.
- ✓ For safety carrying and practical storage they are delivered in plastic system boxes

Note:

All Ektapro Lenses are GEAR RACK lenses! Therefore, not all are compatible with former Kodak S-AV slide projectors. For further information about compatibility see page 30.

Lenses

Compatibility with former S-AV Projectors

Kodak S-AV Retinar Lenses
SPIRAL LENSES

Kodak Ektapro FF Lenses
GEAR RACK LENSES

1992

Suitable for:

- All Kodak S-AV Slide Projectors
- All Kodak Ektapro Models

Suitable for:

- All Kodak Ektapro Models
- Kodak S-AV models 1010, 1030 1050, 2010, 2020, 250, 2050

WEB User

Lens Calculator

You do not know what kind of lens you need for your projection venue? Two well made lens calculators are available on the WEB. It is freeware and can be easily downloaded.

Lens calculator by Bässgen:

Go to <http://www.dia.de> Click on Bässgen and go to Download and click on SCREEN 2.0.

Lens calculator by Stumpfl:

Go to <http://www.stumpfl.com/E/Service/>

Lenses

Lens Support

■ KODAK EKTAPRO Lens Support CAT No 715 1335

- ✓ Gives maximum hold for heavy lenses
- ✓ Is ideal in fixed installations where lens positions (focus, image size) should be kept
- ✓ Supports smooth operation of focus/autofocus when heavy lenses are used

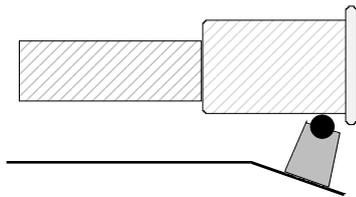

It is recommended to use the following lenses together with the lens support:

KODAK FF Projection Lenses

75-120 Zoom	CAT 847 0346
100-150 Zoom	CAT 143 3432
100-200 Zoom	CAT 712 5743
180mm	CAT 712 5529

KODAK EKTAPRO SELECT FF Projection Lenses

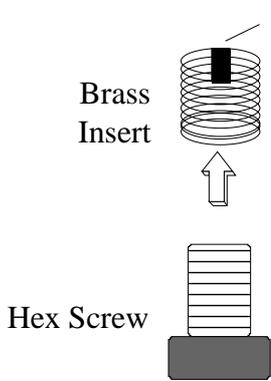

75-120 Zoom	CAT 712 5479
87-200 Zoom	CAT 712 5487
200-300 Zoom	CAT 712 5495
150mm	CAT 712 5461

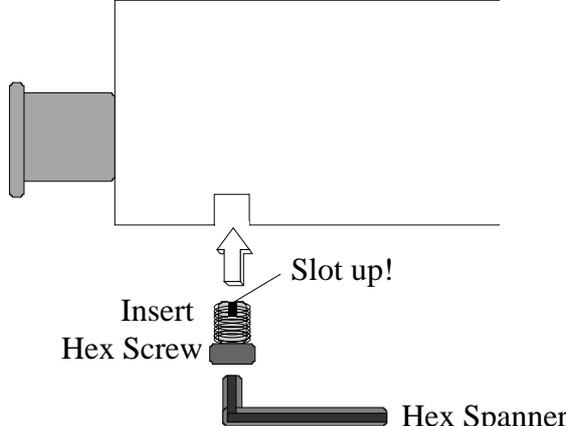

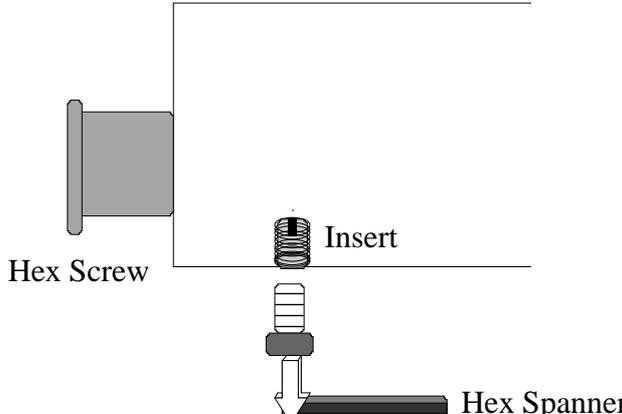

Lenses

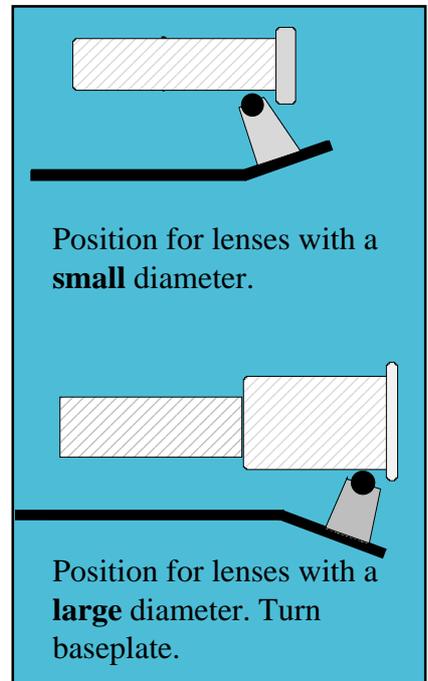

Lens Support

■ Installation

- 1.**  **1.** Screw hex screw into the insert.
2. Use the hex spanner to screw hex screw with the insert into the projector's hole.
3. Remove hex screw and fix baseplate as shown in the picture. The insert remains in the hole.

- 2.**  **2.** Use the hex spanner to screw hex screw with the insert into the projector's hole.

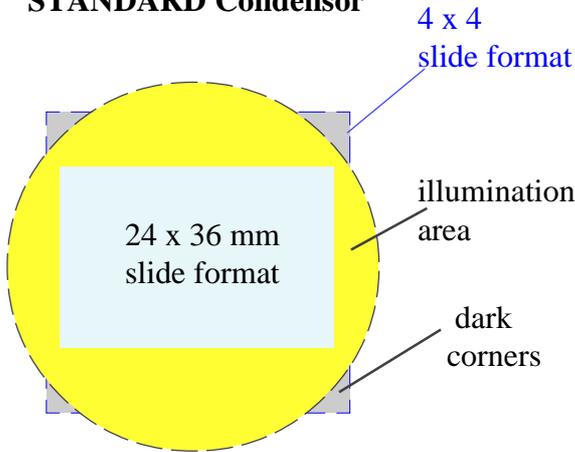

- 3.**  **3.** Remove hex screw and fix baseplate as shown in the picture. The insert remains in the hole.

4 x 4 condensor

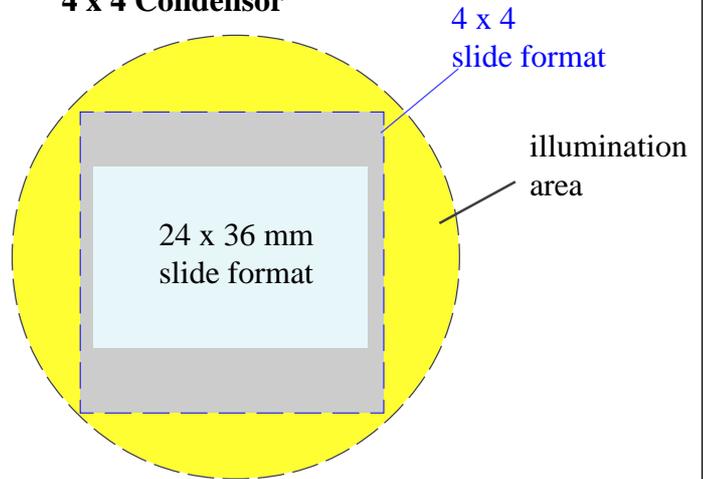

■ **Condensor for 4 x 4 (super slides) Projection**

STANDARD Condensor

Illumination with **standard condensor**: The condensor is adjusted for 24 x 36 mm slides. When projecting 4 x 4 slides, the dark corners will be seen clearly.

4 x 4 Condensor

Illumination with **4 x 4 condensor**: The condensor enlarges the cone of light and minimize the dark corners. When projecting 4 x 4 slides, the dark corners will be seen clearly seen.

Please note: The 4 x 4 condensor will not improve general evenness of illumination! It only will reduce the dark corners when projecting 4 x 4 slides.

The projection of 4 x 4 slides is only recommended with the following KODAK Lenses together with the 4x4 Condensor (CAT No 714 4967):

KODAK FF Projection Lenses	
85 mm	CAT No 712 5503
100 mm	CAT No 712 5511
180 mm	CAT No 712 5529
KODAK EKTAPRO SELECT FF Projection Lenses	
93 mm	CAT No 712 5453
150 mm	CAT No 712 5461

Note:

The 35 mm EKTAPRO Select FF Lens cannot be recommended for 4 x 4 projection!
In general Zoom lenses are not recommended, too. As performance depends on quality of the lenses, we advice you to test Zoom lenses before purchasing.

Lamps

Brightness - Lifetime

		CAT No
EXR	82V 300W 35h	145 2259
FHS	82V 300W 70h	147 7678
EXY	82V 250W 200h	145 2143

Note:

Due to manufacturing lamps can show tolerances within a batch. This is another reason for us not to recommend the use of the EXW lamp, which is available on the market. The EXW is 15% brighter but this is often compensated by tolerances.

■ **Standard - Economy - High Light Setting**

STANDARD Lamp Mode

All Ektapro models

	STANDARD MODE		
	Brightness		Lifetime
EXR	1300 lumens	100%*	35h
FHS	1030 lumens	80%	70h
EXY	780 lumens	60%	200h

ECONOMY Lamp Mode

Possible with
Ektapro 4020, 5020, 7020, 9020

	ECONOMY MODE		
	Brightness		Lifetime
EXR	975 lumens	75%	105h
FHS	780 lumens	60%	210h
EXY	585 lumens	45%	600h

HIGH LIGHT Lamp Mode

Possible with
Ektapro 7020, 9020, only

	HIGH LIGHT MODE		
	Brightness		Lifetime
EXR	1248 lumens	120%	25h
FHS	780 lumens	96%	50h
EXY	936 lumens	72%	140h

* All other percentage values are related to this value!

Lamps

Active Lamp

■ Ektapro Extra Bright DUAL Lamp Module. Choose of the active lamp after lamp replacement

In case the active projection lamp fails, the system automatically activates the second projection lamp. After having replaced the lamp you can choose whether the projector should use lamp 1 (L1) or lamp 2 (L2).

If you want to check which lamp is active switch the economy button. The respective lamp LED (L1 or L2) lights up for a short time.

Mode “Priority Lamp L1” (factory setting)

In this mode the projector will automatically go into lamp 1 position after switching on. This is indicated by a short blinking of the LED L1 when switching the projector on.

Mode “Lamp position on the last active lamp”

In this mode the projector stays -even after replacement of a defect lamp - on the last active lamp in use after switching the projector back on. At unsupervised continuous presentation (projection) this has the advantage that an unused spare lamp with full life time is always available.

Choosing the individual mode

You can switch anytime to the other mode. For this purpose keep the standby button pressed when switching the projector on.

Extra Bright Lamp Module

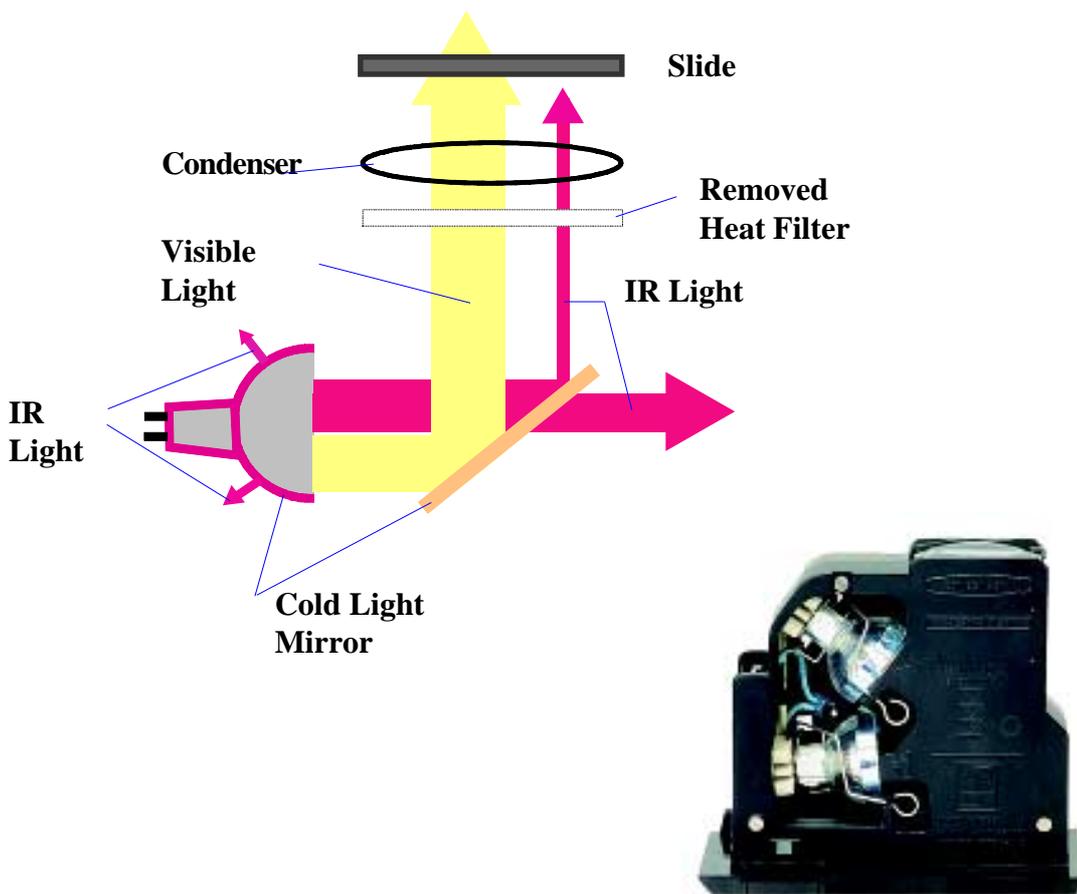

General

■ How it works

All current Kodak Slide Projectors are equipped with the Extra Bright Lamp Module offering 30% more light than compared to former models:

- √ more light
- √ more brilliant colors
- √ higher contrast
- √ better legibility

According to a new cold light mirror the biggest part of the IR (heat) light will be absorbed and not reflected. Therefore, the heat filter could be removed (see illustration). This system is unique to Kodak.

Extra Bright Lamp Module

General

■ Specifications

Kodak Extra Bright SINGLE Lamp Module
CAT No 718 4351

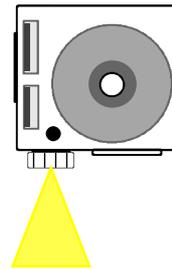

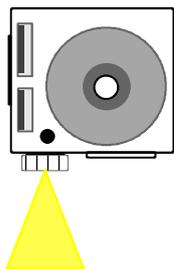

Kodak Extra Bright DUAL Lamp Module
CAT No 718 4369

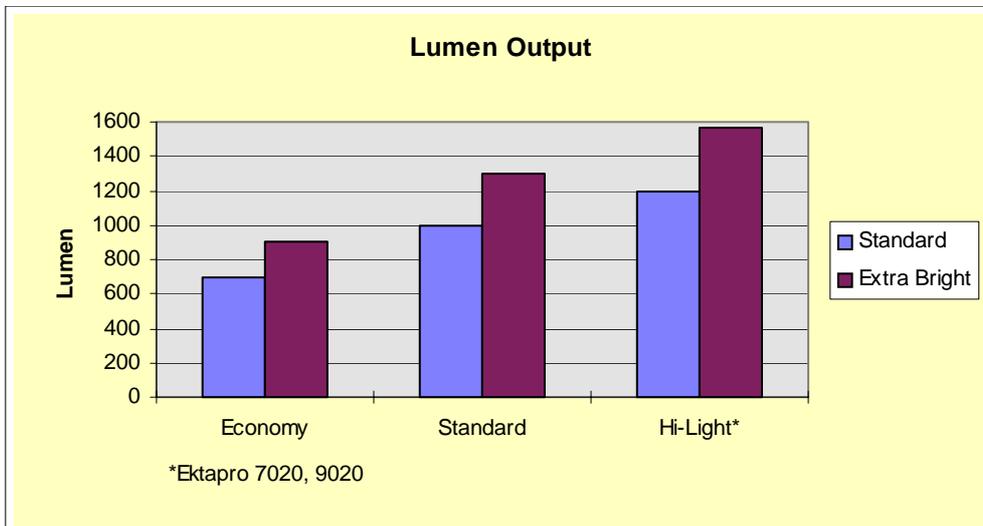

For use with Kodak Ektapro 3000, 3010, 3020 and 320, **ONLY!**

For use with Kodak Ektapro 4010, 4020, 5000, 5020, 7000, 7010, 7020, 9000, 9010 and 9020, **ONLY!**

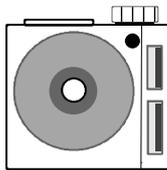

■ Lumen output for *standard, economy and high light* mode.

Extra Bright Lamp Module History

■ Versions of Kodak Ektapro Lamp Modules

Name	Built- in	Heat filter	Comments
Kodak Ektapro Single Lamp Module	Ektapro 3000	Yes - 6 mm thick	
Kodak Ektapro DUAL Lamp Module	Ektapro 5000, 7000, 9000	Yes - 6 mm thick	
Kodak Ektapro Single Lamp Module +10	Ektapro 3010	Yes - 3 mm thick	10 % light increase
Kodak Ektapro DUAL Lamp Module +10	Ektapro 4010, 7010, 9010	Yes - 6 mm thick	10 % light increase
Kodak Ektapro Extra Bright Single Lamp Module	Ektapro 3020, 320	No heat filter! See page 36 for detailed information.	30 % light increase
Kodak Ektapro Extra Bright DUAL Lamp Module	Ektapro 4020, 5020, 7020, 9020	No heat filter! See page 36 for detailed information.	30 % light increase

Extra Bright Lamp Module Downgrading

■ Downgrading (reducing brightness and heat)

There are two reasons for downgrading Ektapro lamp modules:

- ✓ in order to match same slide gate temperature as your former models (e.g. an Ektapro 5020 should match the gate temperature of an Ektapro 5000).
- ✓ in order to match same colour temperature as your former models (e.g. an Ektapro 9020 should match the colour temperature of an Ektapro 9000).

Downgrading is easily done by inserting the proper heat filter:

To modify into		
	Ektapro Lamp Modules +10	Ektapro Lamp Modules
Ektapro Extra Bright Lamp Modules	Insert a 3 mm heat filter CAT No 717 7157	Insert a 6 mm heat filter CAT No 717 7140
Ektapro Lamp Modules +10		Replace the 3 mm heat filter with the 6 mm one CAT No 717 7140

Note:

Never upgrade a lamp module by just taking out the heat filter! This is not allowed as heat increases and could damage your slides! If you need more light for any older Ektapro projector, you can use the Ektapro Extra Bright Light Module! For further information see pages 37 and 38!

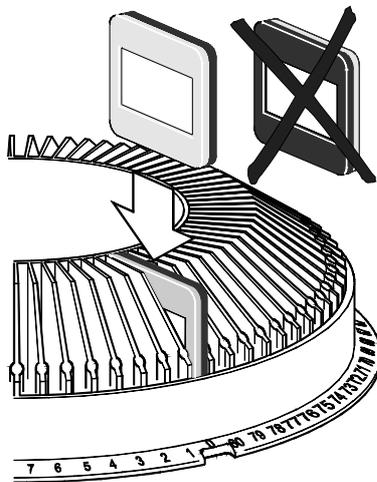

Extra Bright Lamp Module

Safety Precautions

According to a temperature increase in the slide gate which, therefore, needs more careful handling when using slides, mounts and lamps.

With the higher light output of the Extra Bright Lamp Module the temperature in the slide gate rises. To enable a smooth operation following should be considered:

- √ Use **only light** respectively **light gray** slide mounts (e.g. Wess slide mounts). Slide mounts with only one dark or black side have to be sorted in with the light side facing the lamp. Please pay special attention when sorting your slide mounts in rear projections:

- √ Do not use a lamp type EXW/15 h for the projector (higher temperature - lamp not available from Kodak).
- √ Consider the room temperature! It may not exceed 35 degrees C!
- √ High-Light-Mode (models 7010, 7020, 9010, 9020): Slide projection time per slide may not exceed **1 minute!**

If these hints are not considered, mounts may deform!

■ Slide Gate Temperature

Lamp Module	Temperature °C		
	EXR lamp	FHS lamp	EXY lamp
Extra Bright	80	58	49
Extra Bright in High Light Setting	90	64	56
Extra Bright in Economy Setting	65	50	42
Standard	65		
Standard +10	75		

Extra Bright Lamp Module

Sweat Spots

■ Sweat Spots

Due to the higher slide gate temperature of the Extra Bright Lamp Module, sweat spots may appear faster when glass mounted slides are used (in long term projections). As soon as the slides warm up the spots will disappear. Have a look at the following hints:

- Switch on the projector with the loaded tray approx. half an hour before you start your presentation and let the projector transport (using the built-in timer.) The slides will warm up.
- Leave the projector with the loaded tray overnight in the standby mode. Heat will be sufficient to warm up your slides.
- If you do not need highest light output, use the economy lamp setting or use the FHS or EXY lamp.

Compliments of:
www.KodakParts.com

External Control General

■ The state of the way to control Ektapro slide projectors

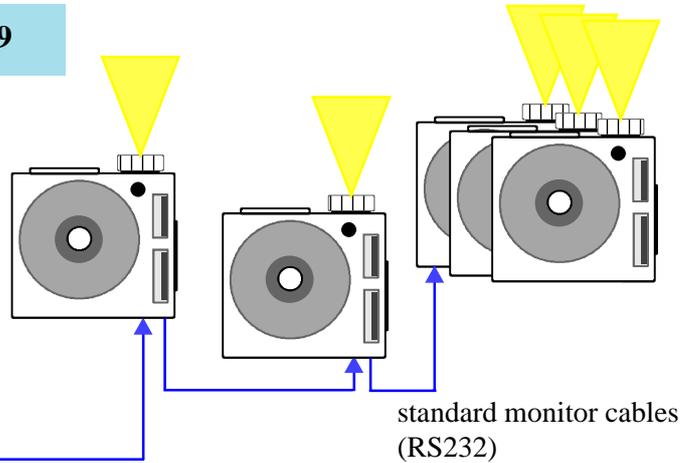

Thanks to the modern RS232 interface (P-Bus) of the Ektapro slide projectors controlling and programming slide shows have never been so easy and comfortable as nowadays. Hence, all systems on the market are based on the same controlling principals: Either they do a direct control via a PC (see illustration 1) or control is done via a separate hardware controller (see illustration 2).

Please note, you will still find systems on the market which do not use any software for the programming and /or controlling. But the possibilities in creating shows are rather poor as the systems have access to only a few of the features of the Ektapro projector. In most cases such systems synchronize the dissolves to an audio tape.

addresses see page 69

8	RXD+	Receive Data

External Control P-COM Protocol

■ Need to create own software?

The Command Language

A character string that both the computer and the projector understand must be defined in order to give the projector clear commands. The defined character string for the KODAK EKTAPRO Slide Projectors is called P-Com Protocol and is in binary form. Please note this is not a software to be installed once on the computer to produce the necessary commands. It is simply the character strings necessary in order to

program the commands. Hidden behind the name P-Com is, therefore, nothing other than the “projector’s communications language”. Programms can be written for the individual needs of the user. The booklet is available at Kodak.

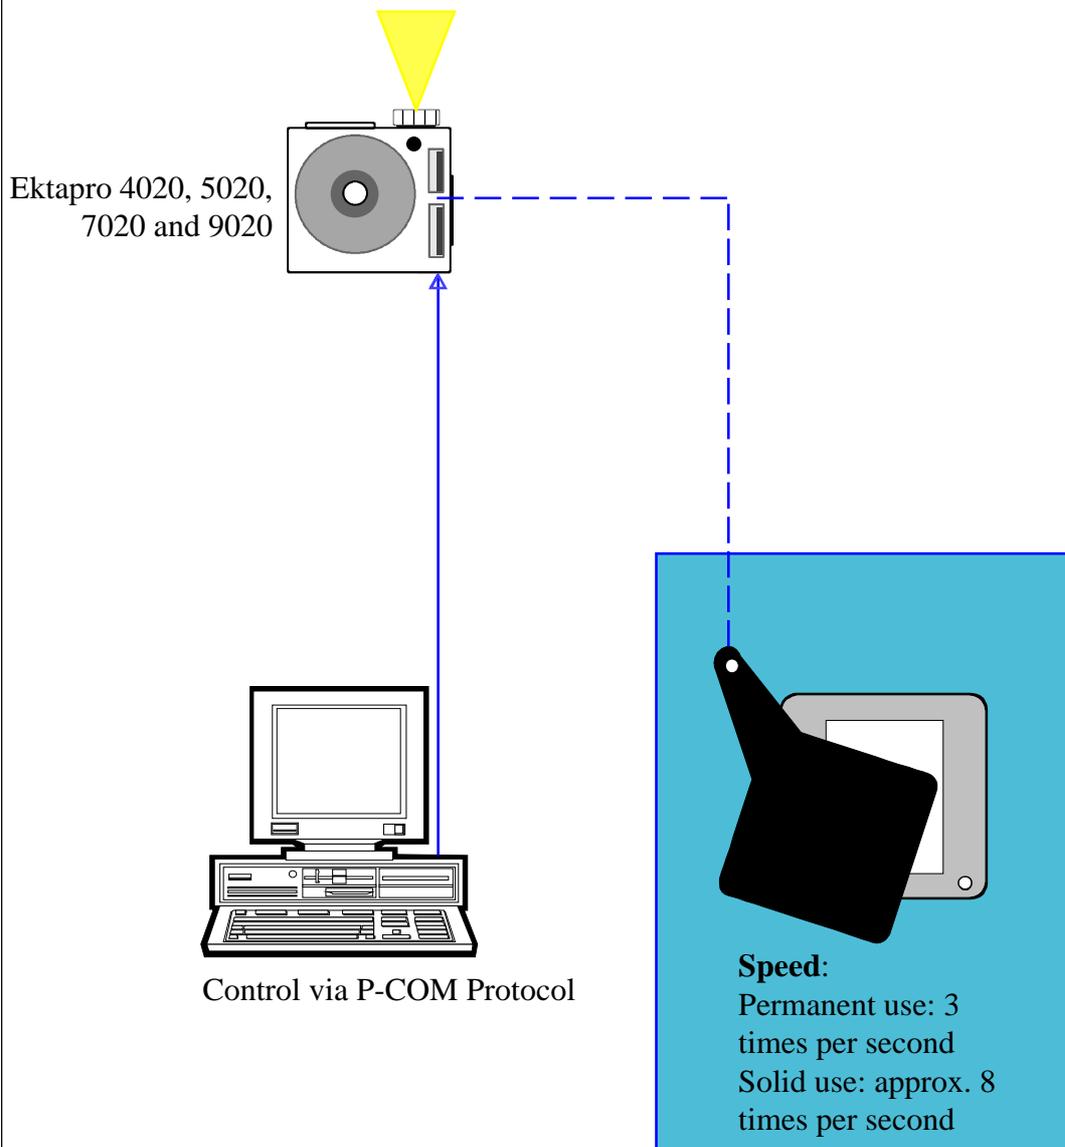

Following we give you an overview about all command which can be created. **Note, due to model changing and different features not all commands (e.g. fade up/down) can be used for all models!**

Command	Valid for the following EKTAPRO Models

External Control

Shutter Control

■ Shutter Control via PC

Note

If shutter is moved in its fastest speed for some seconds, the shutter may get slower or switch off and on again (after some minutes) by the internal thermal cut.

External Control

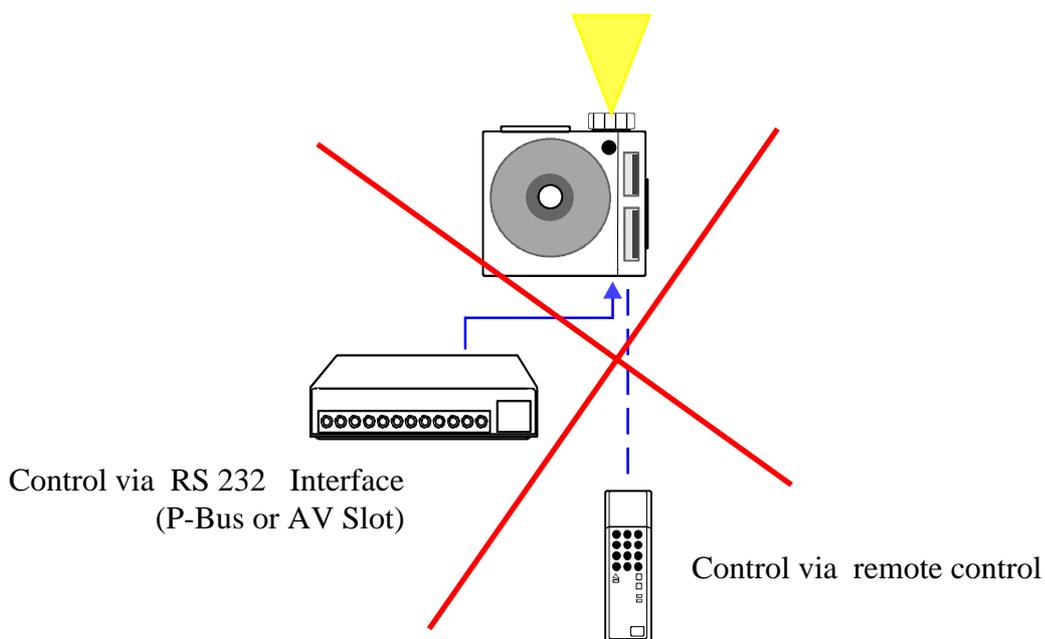

Important Hint

- **Simultaneous Control via IR Remote and via RS232 controllers (AV Slot, P-Bus)**

Important

If you control the Ektapro via the RS232 computer interface (P-Bus or AV slot) you are not allowed to send additional commands via a remote control or vice versa! This will create conflicts in the command executive!

External Control Important Hints

■ Controlling an Ektapro via 1000 Hz Cassette Recorder

Years ago there have been cassette recorders on the market with a slide synchronizer installed. The synchronizer allowed to send and record a 1000 Hz signal to the projector which actuated the slide transport. The 1000 Hz recorders can be used with an Ektapro but a so called slide synchronizer adapter between recorder and projector is needed. As only a simple closing contact is required it is possible to solder such an adapter by your own. For further details see page 67.

■ Last slide position memory

If the Ektapro is switched on and off the system executes a check up and turns the transport ring and slide tray into the zero position. Hence, when switching the projector on again, it will not proceed with the slide position at the time you switched it off.

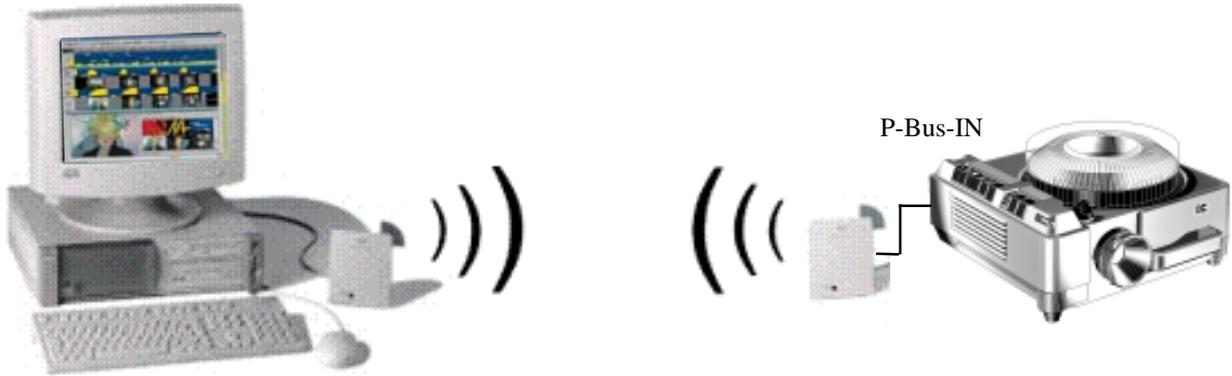

If you need such a special feature we can offer you a modified Ektapro model. It is the **Ektapro 9020 Cine** - a model special modified for the needs of a cinema. When switched off, the projector remembers the tray position. When switched on, the tray is automatically transported to this position

Since these models have other modifications as well, we advise you to get further details from Kodak before purchasing it.

External Control Cordless RS 232 Control

■ Cordless RS232 control of Ektapro Projectors

*A new IR V.24/RS232 adapter by Siemens allows cordless connection (DECT standard) of an Ektapro to a PC (or any other hardware with RS232 interface).**

Key Benefits

- If the distance between computer and projectors is greater than 30 m, data transfer with the standard monitor cable is not guaranteed. In this case you need special amplifiers or you can use this cordless transfer device.
- Sometimes cordless transfer is a solution if -according to some other reasons - there is no way to lay any cables.

Siemens ( [address see page 72](#)) offers a data adapter with standard V.24 interface for cordless DECT (digital enhanced cordless tele communications) data connection with a high-speed transmission rate of up to 115 kbit/s.

Indoors the device will work properly up to **50 m**, **outdoors up to 300 m**.

* there are also RC433 MHz infrared systems on the market available.

- **Low Weight**
- **Stackable**

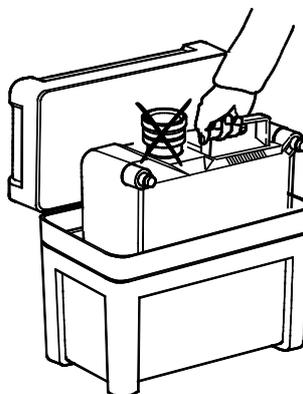

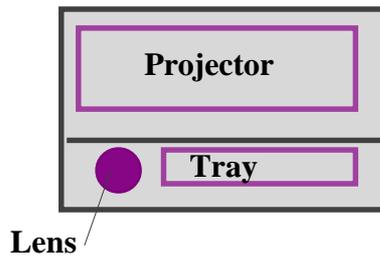

CAT No 718 1993

Dimensions

Inside: 380 x 260 x 255 mm (W x D X H)

Outside: 380 x 260 x 255 mm (W x D X H)

To carry **projector, lens and tray**

Professional Installation Racks - Fixing the projector

■ Racks

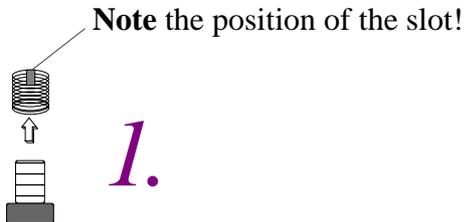

Some companies offer racks for professional use. (👉 Addresses pages 69 and 72)

■ Fixing the projector

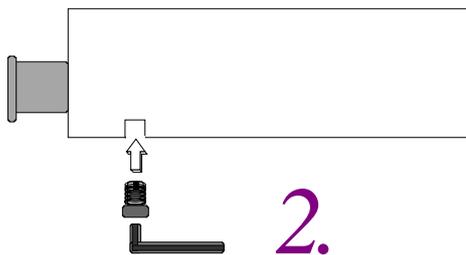

For fixing the projector you can use the three holes on the bottom (👉 see illustration next page!) Into the holes you have to screw so called inserts (expansion collars) that can hold the screws. The illustrations show how to put the inserts into the projector's holes.

Inserts (expansion collars)
outer thread M7
inner thread M5

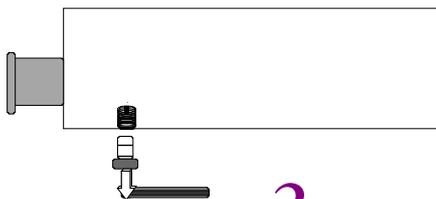

Screws M5
(max. length allowed 49 mm)

Fixing Holes

■ Fixing Holes

Professional Installation Tilting - Operating Temperature

■ Tilting

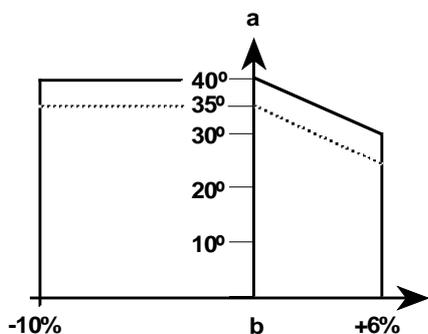

■ Operating Temperature

Note

Standard and economy setting:
Minimum 0° C and maximum +40° C
High Light setting (models 7020/9020):
Minimum 0° C and maximum + 35° C

a = Ambient temperature
(C°)
b = Nominal voltage

Professional Installation

Boxes, Furniture

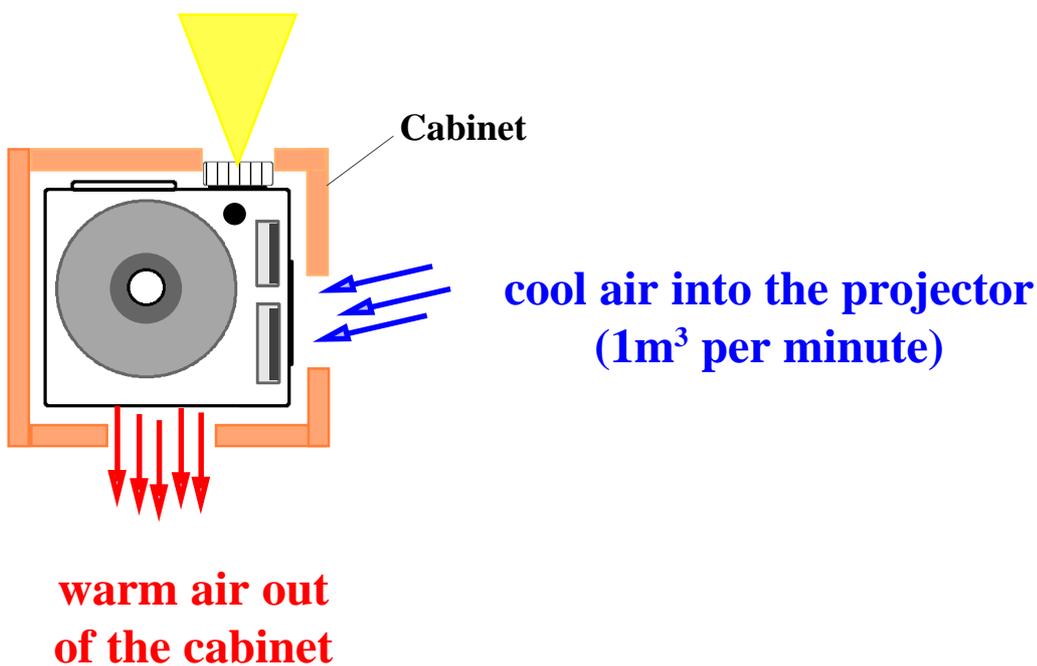

■ Installation in boxes, furniture

Important Note

Proper ventilation is required!

Check that the projector can draw-in sufficient cool air and that warm air can be freely expelled. Keep air inlet and air outlet free from obstruction!

Note

Should the projector overheat, e.g., due to lack of cooling air, the built-in thermal cut-out automatically switches the lamp off and on again once it has cooled down.

Professional Installation

Line-up

■ Line -Up

Ektapro
4020, 5020,
7020, 9020

Aligning the projectors i.e. fully fading up all projectors, in multivision operation is difficult, since dissolve units often do not provide this kind of option.

With the Line-up feature you can turn the light of every projector on and off independently. This means the projectors can be aligned or checked at any time.

You can **only set the line-up on the projector panel.** (The external controlling via P-Bus is rejected during setting. With line-up standby will also be switched off and the shutter will be opened):

Line-up on: Press both transport buttons on the projector simultaneously for at least 1 second. The lamp now lights up at a maximum output and the zero position indicator (green LED) flashes.

Line-up off: Press the standby button!

Note, line up slides are offered by the professional slide mount manufacturer. Sometimes manufacturer of control systems offer them, too.

■ P-Bus-in and P-Bus-out

The following pin connections are used for data transmission:

- Pin 2: Transmit Data TxD
- Pin 3: Receive Data RxD
- Pin 5: Signal ground

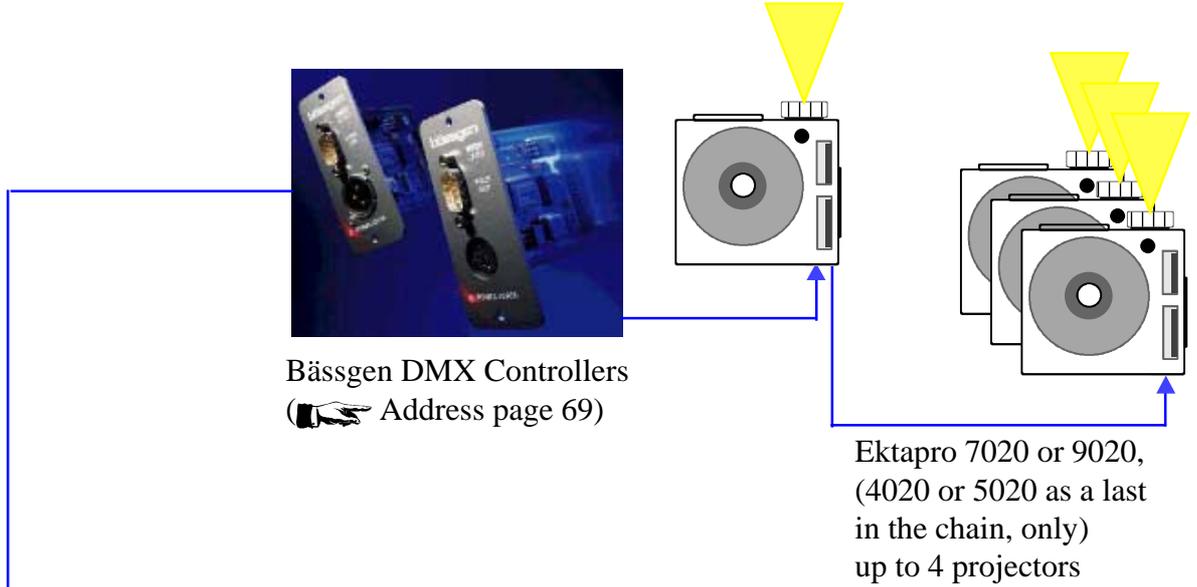

Applications

Opera Houses (Theatre)

- Control via Lighting Control Console (DMX-512 standard signal line)

Lighting Console with DMX 512 Standard

Applications

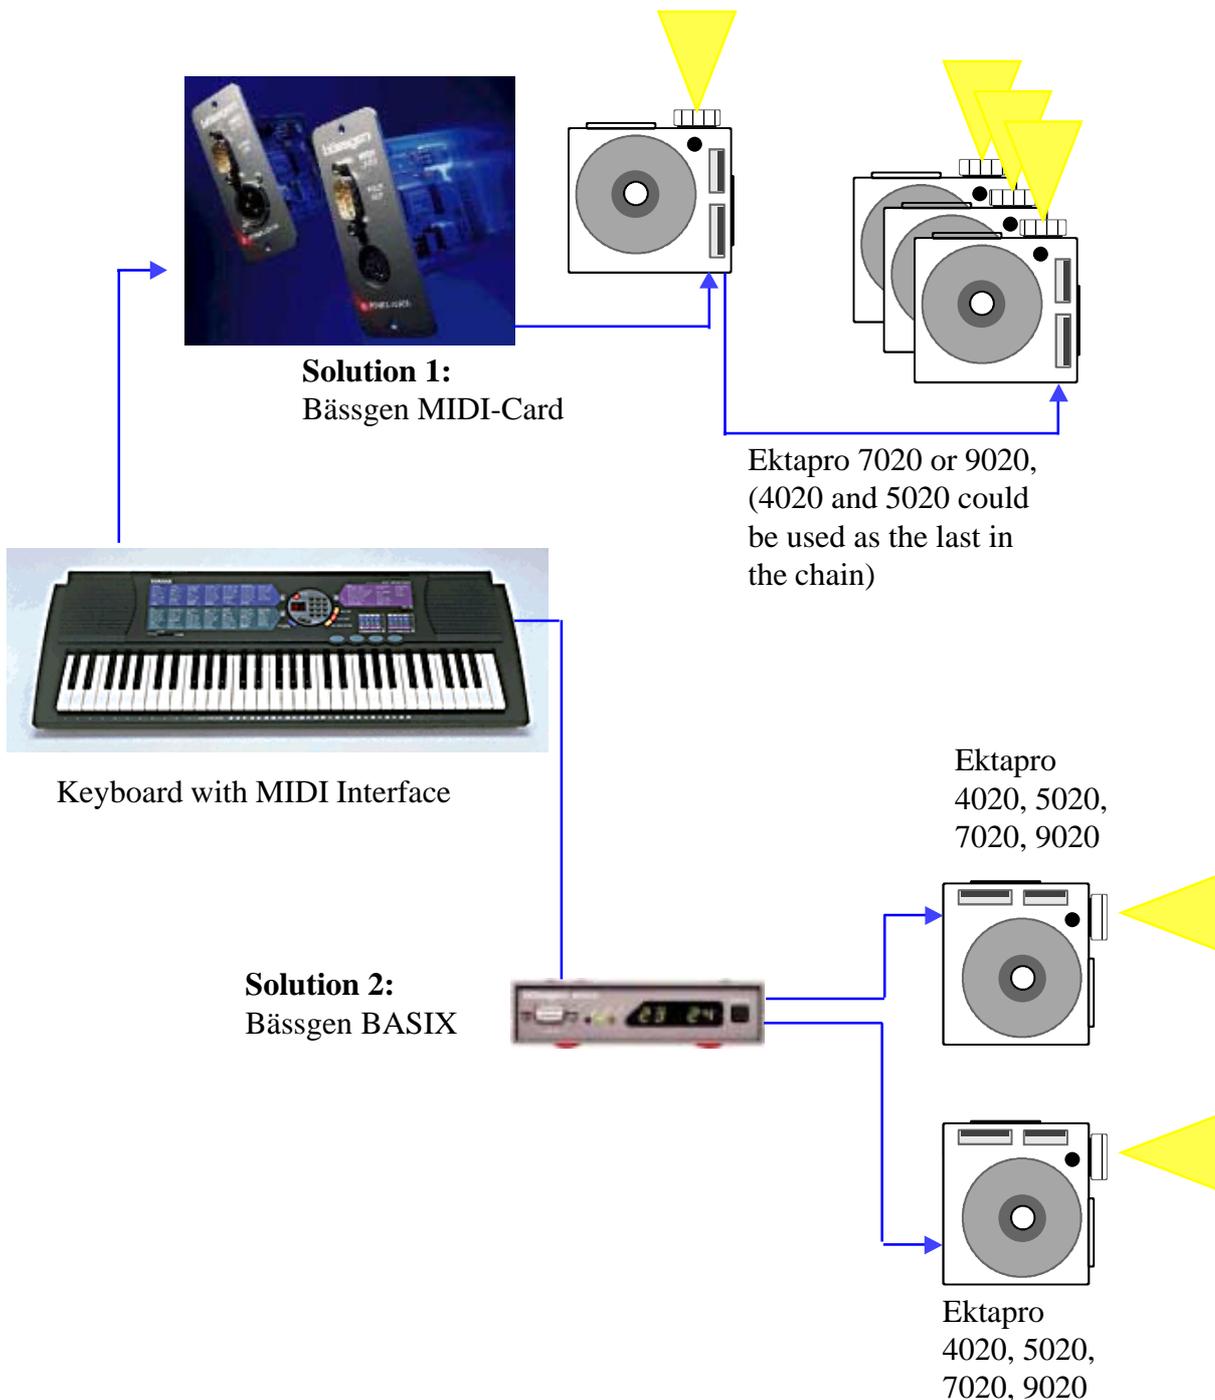

Music-Stages (Performance)

■ Control via MIDI Signal (from any MIDI music device and MIDI sequencers)

The Bässgen MIDI Cards or the Bässgen BASIX controller allows to control and program Ektapro slide projectors from any music instrument with MIDI interface (e.g. keyboard) and computers with music sequencers. This allows new applications and might especially be interesting for musicians. It allows them to have slide projection on stage ( Address page 69).

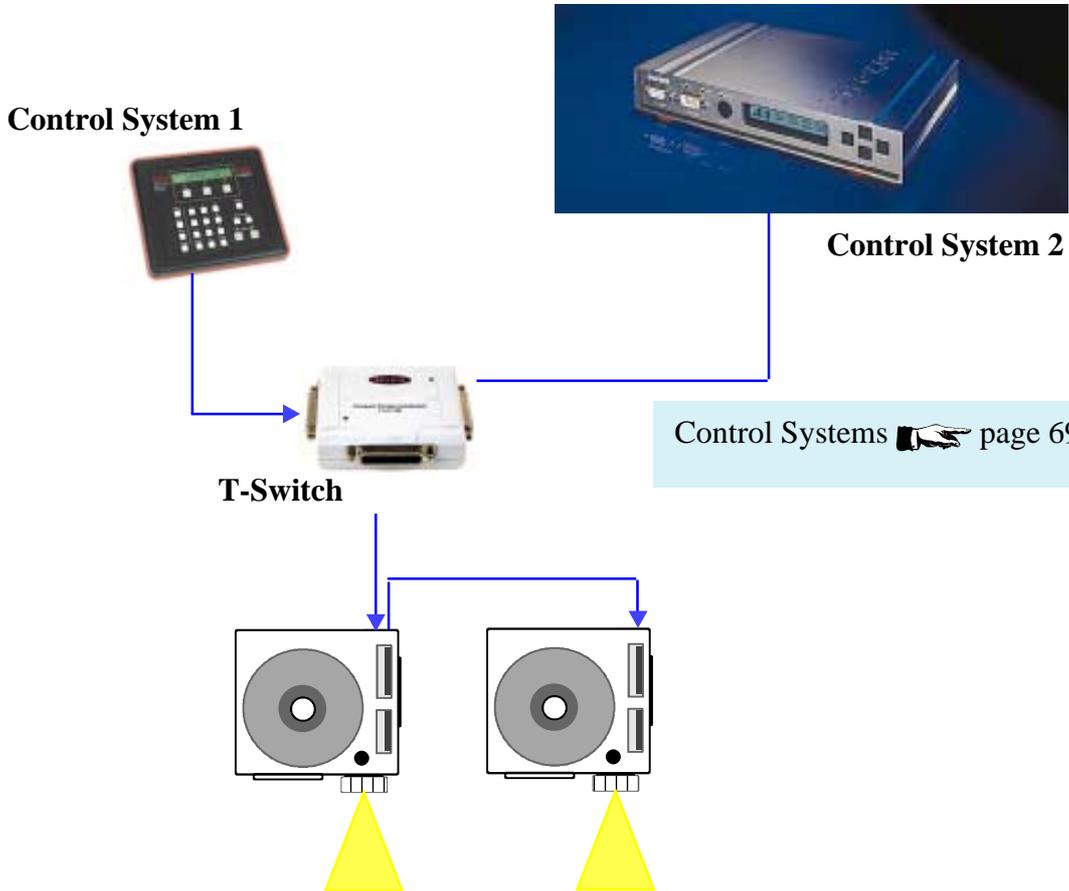

Applications

Business Presentation

■ Use of two control systems via standard computer switchboard

Control Systems page 69 - 72

Ektapro
7020, 9020 (4020 and 5020 for stand alone applications or as a last in a chain, only)

Applications

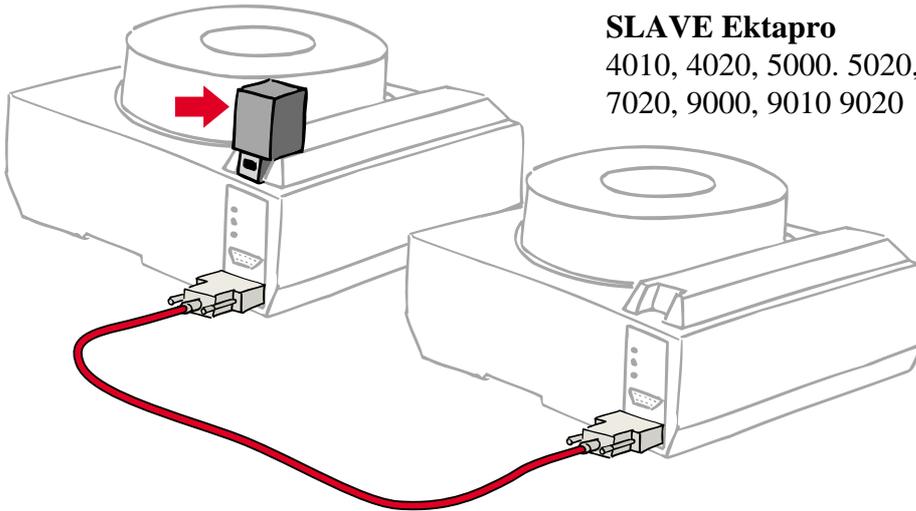

Business Presentation

■ **Presenting with two projectors via integrated dissolver. Take control of the presentation!**

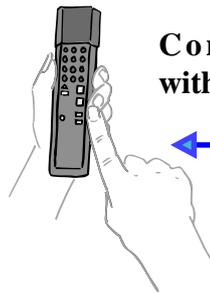

MASTER Ektapro
7020, 9020

SLAVE Ektapro

Autotimer (1-60 s)	601 - 660
---- off	600

- Presenting with two projectors (MASTER-SLAVE) via integrated dissolver.

1. One field (screen) application. Two projectors dissolve.

Setting the dissolve time:

Input dissolve times of 0 sec (hard cut) up to a long dissolve of 9.9 sec in increments of a tenth of a second
Code: <801 - 899>

Example: 4 s
Input <840> and confirm with <*>

 **For further details see the projectors manual!**

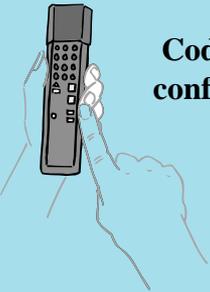

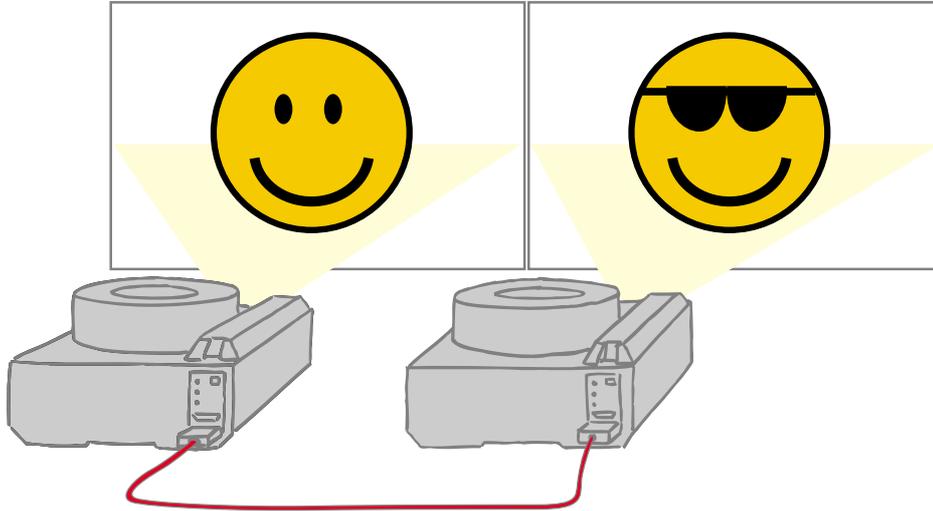

Applications

Business Presentation

2. Two fields (screens) application parallel in harmony or panorama.

Code: <970> and confirm with <*>

3. Parallel independent

For further details see the projectors manual!

With the number combination <980> and <*> you can control the transport of the **two projectors individually** with the remote control.

Code: <980> and confirm with <*>

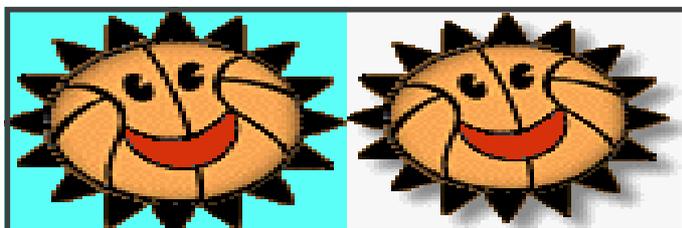

Applications

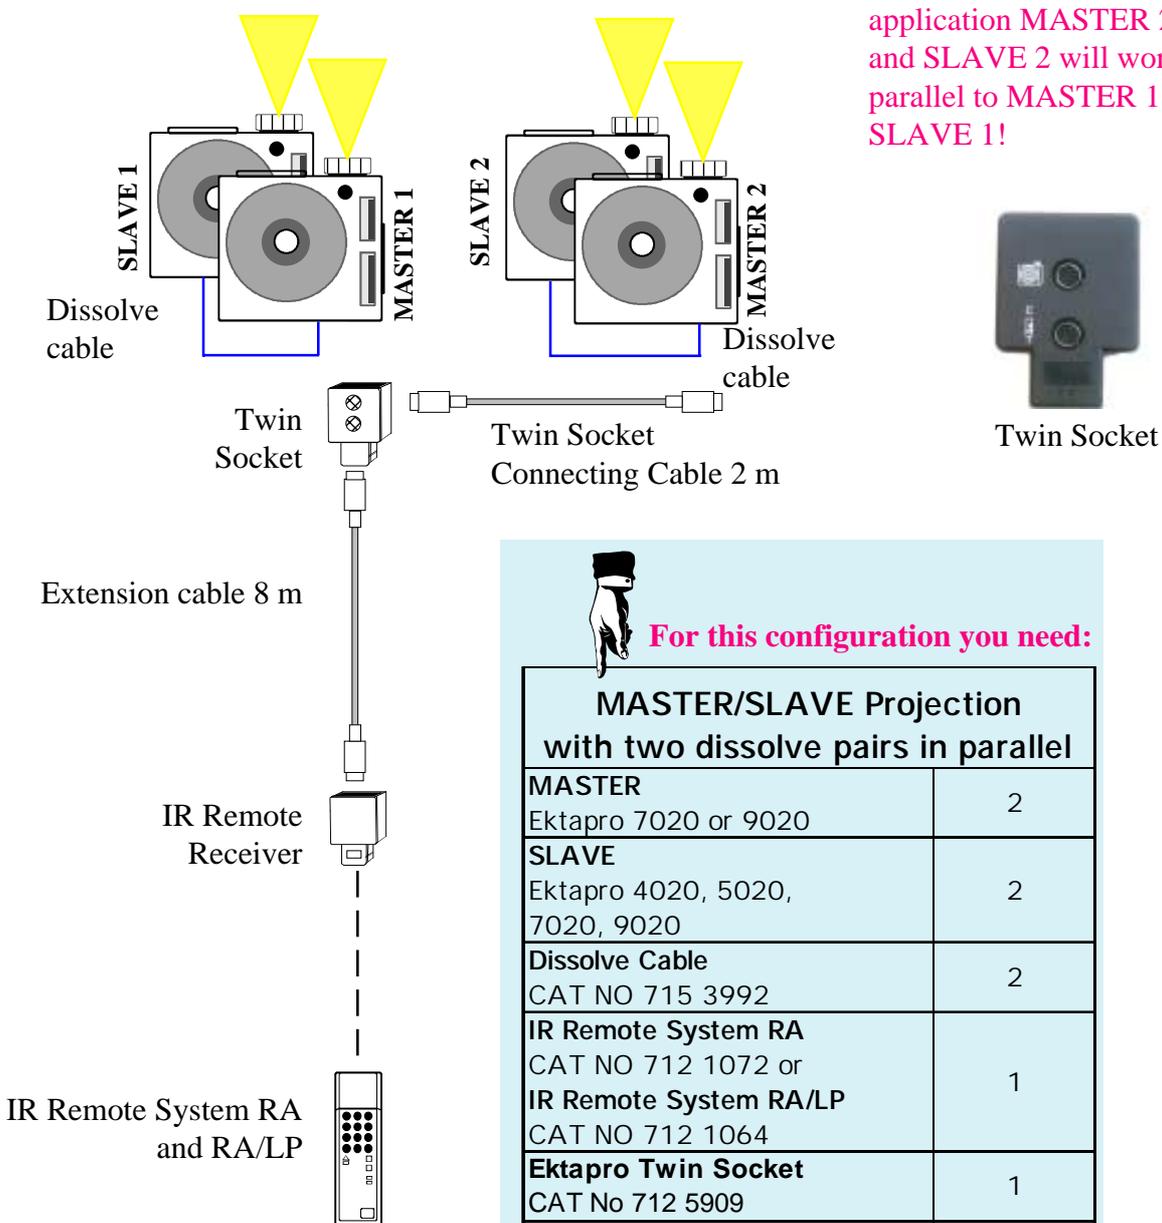

Business Presentation

4. Two fields (screens) - application parallel in harmony or panorama with four projectors

For setting the dissolve time see page 62. Please **note**, in this special application MASTER 2 and SLAVE 2 will work in parallel to MASTER 1 and SLAVE 1!

For this configuration you need:

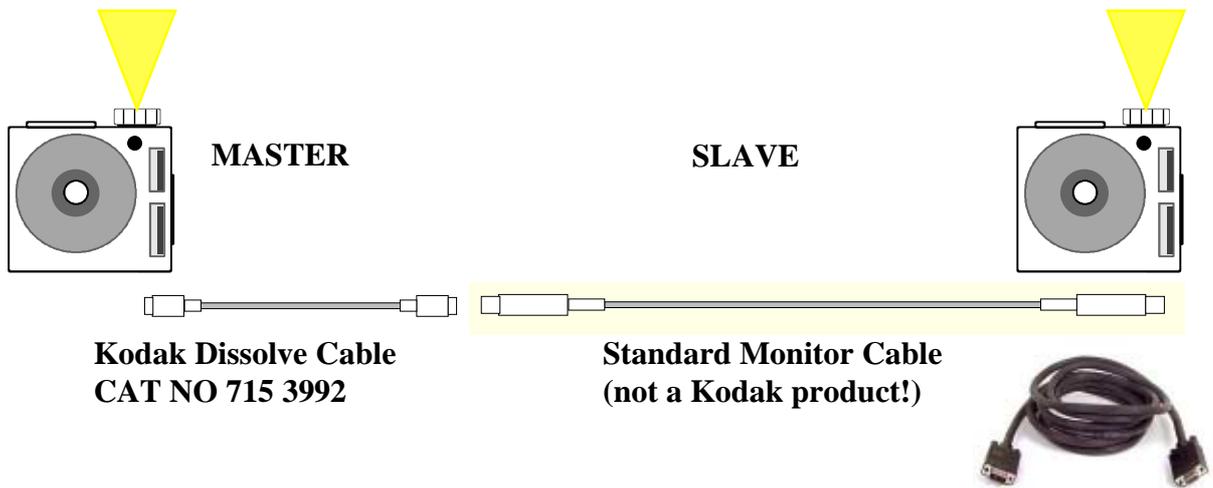

MASTER/SLAVE Projection with two dissolve pairs in parallel	
MASTER Ektapro 7020 or 9020	2
SLAVE Ektapro 4020, 5020, 7020, 9020	2
Dissolve Cable CAT NO 715 3992	2
IR Remote System RA CAT NO 712 1072 or IR Remote System RA/LP CAT NO 712 1064	1
Ektapro Twin Socket CAT No 712 5909	1
Ektapro Twin Socket Connecting Cable CAT No 712 5917	1

Applications Business Presentation

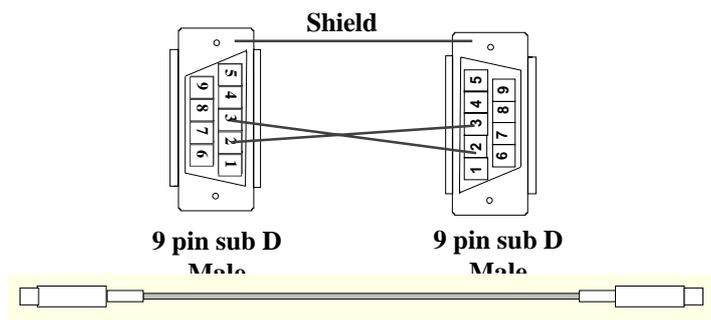

■ Dissolve Cable Configuration

The Kodak Ektapro Dissolve cable has a length of 1 m sufficient enough to connect the MASTER and SLAVE projector in almost any application. If for any reasons longer cables are requested you have two choices:

1. You buy a standard monitor extension cable (RS232 cable - available at computer retailers) and extend the dissolve cable. **Do not use the extension cable alone! Neither will it fit, nor the pin configuration will match!**

2. You configure a cable at the length you need. Note, you need **two sub D Male connectors!**

Dissolve Cable		
Pin		Description
2	RXD	Receive Data
3	TXD	Transmit Data
5	GND	Ground

Do not connect GND with Shield!

Applications

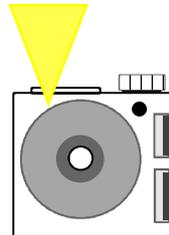

Business Presentation

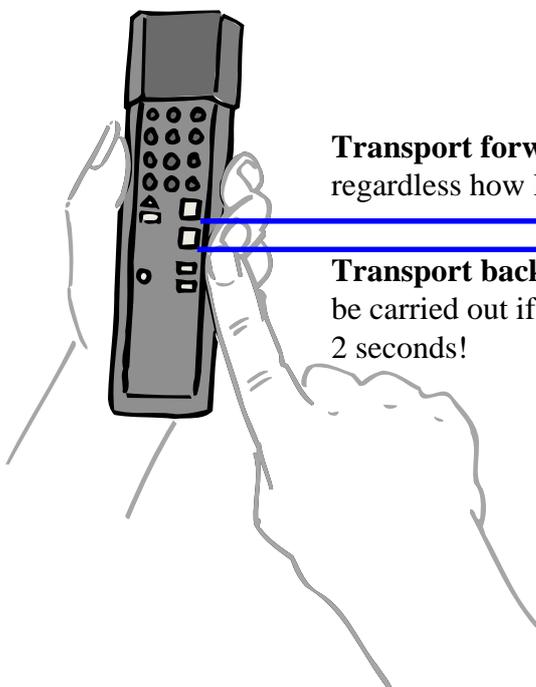

■ IR Remote Control Security Setting

With the security setting you can set up your remote control so that when the transport button is pressed, only one transport step or only one dissolve is executed. The focus buttons are also disabled so that if you happen to press the buttons, the focus on the projector is not changed. All other functions remain active (and can be secured by the cover on the remote control). Even novice presenters can now “not put a foot wrong”!

Ektapro
4020, 5020,
7020, 9020

Transport forwards: Only one transport step, regardless how long button is pressed.

Transport backwards: A transport step will be carried out if button is pressed longer than 2 seconds!

Applications

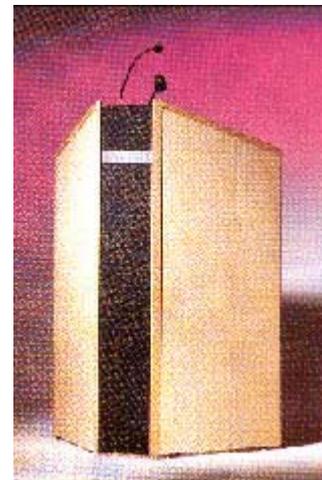

Business Presentation

■ Using built-in control systems (control from a speaker's desk) or former S-AV Cable Remote Control

Almost all congress halls, lecture halls etc. have speaker's desks. From this desk the speaker is able to use installed remote controls for all kinds of presentation equipment such as slide projectors. In many cases the technique of control is based on "closing contacts". All Ektapros (except the Ektapro 320) accept digital commands only; and therefore, can not directly be connected to the existing cables at the venue. For connecting to such systems use a so called "slide synchronizer adapter"

Addresses see page 71 and 72).

Pin Configuration for the Ektapro 320:

The projector has an 8-pin connector. Hence an adapter between the projector and existing 6 pin cable (or S-AV cable remote control) is necessary.

Pin 8 must always be connected with pin 2!

Slide transport forwards:

connect pin 7 with pin 2

Slide transport reverse:

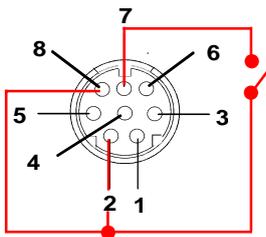

connect pin 6 with pin 2

Focus forwards:

connect pin 5 with pin 2

Focus backwards:

connect pin 4 with pin 2

e.g. slide transport forwards

Note: If you need a simple closing contact for a **slide transport forwards, only** (e.g. to connect a 1000 Hz AV recorder or an external slide synchronizer) you have the following options:

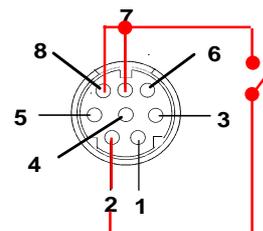

- Use of a slide synchronizer adapter (**Addresses see page 71 and 72)** or
- Solder an adapter with the following pin configuration:
For Ektapro 320: See above

For all other Ektapro projectors:

Pin 8 must always be connected with pin 7!

Slide transport forwards:

connect pin 7 with pin 2

Applications

Business Presentation

■ Controlling a projector via PC and PowerPoint software

Splint is a Microsoft PowerPoint® 97 or PowerPoint® 2000 add-in which allows you to link your PowerPoint® presentation to slides in a Kodak Ektapro® slide projector (model 40XX and higher). Once you have put your presentation together you can simultaneously show your PowerPoint® screens with relevant slides from your projector.

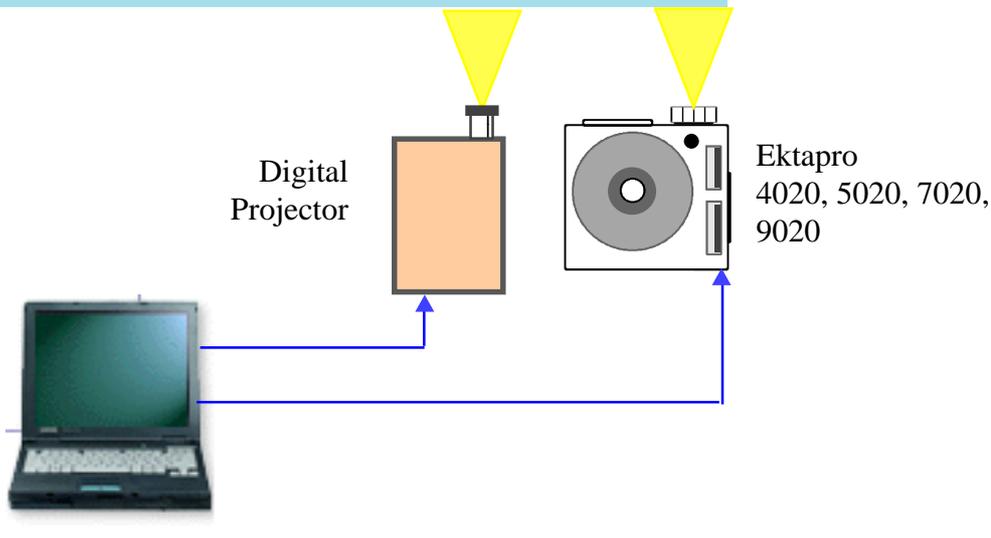

This approach means you can use a computer-based presentation and yet still make excellent use of your legacy 35 mm slides without the need to scan and digitize them.

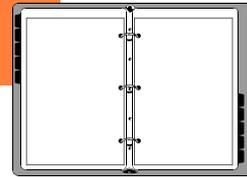

While you are running your PowerPoint® presentation, the Splint controller appears as a narrow band at the top of the screen, and can be hidden so as not to confuse your audience.

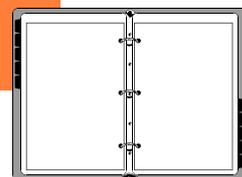

Note

The software is FREEWARE and can be downloaded at www.rightword.com.au/products/splint

■ Lifetime of Ektapro Projectors

Quality find its strongest expression in reliability and in the lifetime of a product. Lifetime is measured as the moment a major defect occurs and the projector has to be sent for service. Kodak Ektapro projectors average lifetime has been constantly improved. Starting with 450 000 cycles at launch in 1992 the projector is now backed by a full cycle test of **10 million slide changes** until first major defects occur.

10 million slide changes means having projected approximately **125 000 full 80 slide trays** - giving when piled on top of each other a height of approx. 8.5 km!

***10 000 000
SLIDE CHANGES***

■ **Models - Year of Launch and Modifications**

Year	Model	Replaces	Important New Feature
1992	3000		
1992	5000		
1994	3010	3000	New lamp module + 10 (offering 10% more light) Random Access
1994	4010		New lamp module + 10 (offering 10% more light)
1995	7010	7000	Integrated Dissolver, Line up, Definite Standby, "Sleeping mode" after switching on, New lamp module + 10 (offering 10% more light)
1995	9010	9000	Integrated Dissolver, Line up, Definite Standby, "Sleeping mode" after switching on, New lamp module + 10 (offering 10% more light)
1995	3020	3010	Extra Bright lamp module (offering 30% more light)
1997	7020	7010	Extra Bright lamp module (offering 30% more light), lamp in use indication
1997	9020	9010	Extra Bright lamp module (offering 30% more light), lamp in use indication
1997	320	3020	Only for use of the 80 slide tray No "no slide no light" function No "standby" function No "power on" indication
1997	4020	4010	Extra Bright lamp module (offering 30% more light) "Lamp in use" indication "Line-up" feature "Definite standby" feature "Sleeping mode" after switching on
1997	5020	5000	Extra Bright lamp module (offering 30% more light) "Lamp in use" indication "Line-up" feature "Definite standby" feature "Sleeping mode" after switching on
